recording music on location provides an exceptional collection of information regarding all aspects of recording outside of the studio featuring clear explanations on how to achieve professional results this book is divided into two distinct sections popular music and classical music whether you record in the local rock club jazz café or in an orchestra hall bartlett offers sage advice on each stage of the process of location recording packed with hints and tips this book is a great reference for anyone planning to venture outside of the studio audio examples tracking sheets weblinks and

downloadable checklists are available on the companion website at focalpress.com cw bartlett this edition has been thoroughly updated and includes new sections on ios devices usb thumb drive recorders and digital consoles with built in recorders along with updated specs on recording equipment software and hardware this edition will also show you how to prepare recordings for the web and live audio streaming and covers spectral analysis noise reduction and parallel compression a new case study will go in depth on classical music recording

Trafic et performances des réseaux de télécoms

2003-07-01

this report produced between 1984 and 1987 in a bilingual edition english and french provides a wealth of information on a wide variety of cartographic applications which are being developed to make effective use of new data that is now being collected by earth observation satellites at a time when natural resource development and environmental problems have to be taken into account in their entirety satellites provide an exceptional means of evaluating synthesizing and creating geographic information the production of new images such as the landsat thematic mapper the spot high resolution visible sensor and the adoption meteorological images such as avhrr sensors on noaa satellites which have been extended to thematic domains such as agriculture and glaciology have led to many new developments as well as problems for the cartographer these problems are numerous and varied and recur frequently depending on the images and themes being processed e.g. how to select the graphic specification of maps and legends and account for classification accuracy how to introduce the minimum of topographical data into an image in order to supply users with an adequate geographic reference when using a physical terrain image on which by definition there are no blanks and where no details have been eliminated how to overcome conceptual difficulties e.g. the side by side placing of different semiological information the interpretation levels left to reader achieving a balance between objectivity and readability obviously the cartographers role is of prime importance in solving these problems in order to illustrate the way in which this information is presented the report provides samples from 33 thematic applications taken from 13 different categories including agriculture town planning and water resources each application is provided with a descriptive note both in english and french indicating the objective method and results obtained this volume provides an important record of current developments in thematic mapping from satellite imagery and should be essential reference for all cartographers
