dreams in freud s view are all forms of wish fulfillment attempts by the unconscious to resolve a conflict of some sort whether something recent or something from the recesses of the past later in beyond the pleasure principle freud would discuss dreams which do not appear to be wish fulfillment because the information in the unconscious is in an unruly and often disturbing form a censor in the preconscious will not allow it to pass unaltered into the conscious during dreams the preconscious is more lax in this duty than in waking hours but is still attentive as such the unconscious must distort and warp the meaning of its information to make it through the censorship as such images in dreams are often not what they appear to be according to freud and need deeper interpretation if they are to inform on the structures of the unconscious

in creating psychoanalysis a clinical method for treating psychopathology through dialogue between a patient and a psychoanalyst freud developed therapeutic techniques such as the use of free association in which patients report their thoughts without reservation and in whichever order they spontaneously occur and discovered transference the process in which patients displace on to their analysts feelings derived from their childhood attachments establishing its central role in the analytic process freud's redefinition of sexuality to include its infantile forms led him to formulate the oedipus complex as the central tenet of psychoanalytical theory his analysis of his own and his patients dreams as wish fulfillments provided him with models for the clinical analysis of symptom formation and the mechanisms of repression as well as for elaboration of his theory of the unconscious as an agency disruptive of conscious states of mind freud postulated the existence of libido an energy with which mental processes and structures are invested and which generates erotic attachments and a death drive the source of repetition hate aggression and neurotic guilt in his later work freud drew on psychoanalytic theory to develop a wide ranging interpretation and critique of religion and culture psychoanalysis remains influential within psychotherapy within some areas of psychiatry and across the humanities as such it continues to generate extensive and highly contested debate with regard to its therapeutic efficacy its scientific status and as to whether it advances or is detrimental to the feminist cause freud's work has nonetheless suffused contemporary thought and popular culture to the extent that in 1939 w h auden wrote in a poem dedicated to him to us he is no more a person now but a whole climate of opinion under whom we conduct our different lives
