the rapid increase of cloud computing high performance computing hpc and the vast growth in internet and social media use have aroused the interest in energy consumption and the carbon footprint of data centres data centres primarily contain electronic equipment used for data processing servers data storage storage equipment and communications network equipment collectively this equipment processes stores and transmits digital information and is known as information technology it equipment advanced concepts for renewable energy supply of data centres introduces a number of technical solutions for the supply of power and cooling energy into data centres with enhanced utilisation of renewable energy sources in order to achieve low energy data centres because of the high energy density nature of these unique infrastructures it is essential to implement energy efficiency measures and reduce consumption before introducing any renewable energy source a holistic approach is used with the objective of integrating many technical solutions such as management of the it information technology load efficient electrical supply to the it systems low ex air conditioning systems interaction with district heating and cooling networks re use of heat free cooling air seawater groundwater optimal use of heat and cold storage electrical storage and integration in smart grids this book is therefore a catalogue of advanced technical concepts that could be integrated into data centres portfolio in order to increase the overall efficiency and the share of renewable energies in power and cooling supply based on dynamic energy models implemented in trnsys some concepts are deeply evaluated through yearly simulations the results of the simulation are illustrated with sankey charts where the energy flows per year within the subsystems of each concept for a selected scenario are shown and graphs showing the results of parametric analysis a set of environmental metrics as the non renewable primary energy and financial metrics capex and opex as well of energy efficiency metrics like the well known pue are described and used to evaluate the different technical concepts

during 1942 and 1943 the striking power of raf bomber command was transformed by the arrival of heavy bombers advanced navigation and blind bombing systems and new tactics to concentrate the bombers over the target and swamp the german defences by october 1944 most of germany s cities were in ruins yet the bombing continued to intensify reaching unprecedented levels in the final seven months of the air campaign the value of further area raids was questioned during the opening months of 1945 yet the allies destroyed the remaining cities in a bid to hasten the end of the war the handful of german cities still largely unscathed in early february 1945 included dresden which was obliterated on 13 february ten days later the south german city of pforzheim was destined to suffer the same fate this book commemorates the efforts of the aircrew members who risked their lives consolidating a host of intriguing first hand accounts it also considers pforzheim as a representative community under national socialist rule the city s survivors remember the horror of the raid and its aftermath including eventual occupation by french colonial troops and subsequently american forces tony does an admirable job of presenting historical context when considering actions in

times of extreme trauma and his narrative offers an intriguing engaging and poignant evocation of the closing months of bomber command's war

this book examines ways of assessing the rational management of nonrenewable resources integrating numerous methods it systematically exposes the strengths of exergy analysis in resources management divided into two parts the first section provides the theoretical background to assessment methods while the second section provides practical application

examples the topics covered in detail include the theory of exergy cost and thermo ecological cost cumulative calculus and life cycle evaluation this book serves as a valuable resource for researchers looking to investigate a range of advanced thermodynamic assessments of the influence of production processes on the depletion of nonrenewable resources
