instructions within a plain text script file when you run this script file it lets the shell execute the commands sequentially automating tasks that would otherwise be executed one by one as shown by the example below

```
bin bash logname
```

the logname command would print the user's log name

```
head
```

the head command shows the first lines present in the file for example the head 15 filea command would display the first 15 lines of filea

additional notes this one is among the most crucial shell scripting interview questions
