**Index of Ship Structure Committee Publications** 1978 the report examines and documents the state of the art of ship design it is a compilation of articles prepared by various authors familiar with naval or merchant ship construction

*Ship Structure Committee Long-range Research Plan* 1984 deviations from ideal structural design of different types of vessels during construction and service are investigated selected u s commercial shipyards ship owner operators steel mills and foreign classification societies are surveyed or interviewed with the purpose of documenting major deviations and recurring structural imperfections and determining the factors leading to these deviations an effort is also made to determine the extent of deviations from theoretical design and to establish wherever possible structural tolerance limits which are most commonly used in u s yards and which can therefore be considered representative of u s shipbuilding practice these are compared to published international structural tolerance standards and recommendations are given for further study author
