explain these idea to technical adoptors again
i think we have succeeded we have learned much

for many years we considered human errors or mistakes as the cause of mishaps or problems in the manufacturing industries human error under whatever label procedures not followed lack of attention or simply error was the conclusion of any quality problem

investigation the way we look at the human side of problems has evolved during the past few decades now we see human errors as the symptoms of deeper causes in other words human errors are consequences not causes the basic objective of this book is to provide readers with useful information on theories methods and specific techniques that can be applied to control human failure it is a book of ideas concepts and examples from the manufacturing sector it presents a comprehensive overview of the subject focusing on the practical application of the subject specifically on the human side of quality and manufacturing errors in other words the primary focus of this book is human failure including its identification its causes and how it can be reasonably controlled or prevented in the manufacturing industry setting in addition to including a detailed discussion of human error the book also discusses the elements of user experience user centered design for the web and beyond voices that matter
