the reverend john augustine zahm csc 1851 1921 was a holy cross priest an author a south american explorer and a science professor and vice president at the university of notre dame the latter at the age of twenty five through his scientific writings zahm argued that roman catholicism was fully compatible with an evolutionary view of biological systems ultimately zahm s ideas were not accepted in his lifetime and he was prohibited from discussing evolution and catholicism although he remained an active priest for more than two decades after his censure in faith and science at notre dame john zahm evolution and the catholic church john slattery charts the rise and fall of zahm examining his ascension to international fame in bridging evolution and catholicism and shedding new light on his ultimate downfall via censure by the congregation of the index of prohibited books slattery presents previously unknown archival letters and reports that allow zahm s censure to be fully understood in the light of broader scientific theological and philosophical movements within the catholic church and around the world faith and science at notre dame weaves together a vast array of threads to tell a compelling new story of the late nineteenth century the result is a complex and thrilling tale of neo scholasticism notre dame empirical science and the simple faith of an indian priest the book which includes a new translation of the 1864 syllabus of errors will appeal to those interested in notre dame and catholic history scholars of science and religion and general readers seeking to understand the relationship between faith and science

were the middle ages dark for science did the pope say darwin was right from the big bang to galileo from the origins of life on earth to the existence of life on other planets the catholic church and science clears away the fog of falsehood and misunderstanding to reveal a faith whose doctrines do not contradict the facts of science but harmonize with them and a universe whose uncanny order and precision point not to chance assemblage by random forces but to the purpose built design of an intelligent creator author ben wiker the darwin myth a meaningful world takes on the most common errors that modern materialistic thinkers convinced that faith and science must be mortal enemies have foisted into popular culture with great learning clarity and wit he tackles stubborn confusions many people have about the relationship between christianity especially catholicism and the empirical sciences and separates truth from lies the factual from the fanciful

preface the author of this very practical treatise on scotch loch fishing desires clearly that it may be of use to all who had it he does not pretend to have written anything new but to have attempted to put what he has to say in as readable a form as possible everything in the way of the history and habits of fish has been studiously avoided and technicalities have been

used as sparingly as possible the writing of this book has afforded him pleasure in his leisure moments and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general this section is interleaved with blank sheets for the readers notes the author need hardly say that any suggestions addressed to the case of the publishers will meet with consideration in a future edition we do not pretend to write or enlarge upon a new subject much has been said and written and well said and written too on the art of fishing but loch fishing has been rather looked upon as a second rate performance and to dispel this idea is one of the objects for which this present treatise has been written far be it from us to say anything against fishing lawfully practised in any form but many pent up in our large towns will bear us out when we say that on the whole a days loch fishing is the most convenient one great matter is that the loch fisher is depend ent on nothing but enough wind to curl the water and on a large loch it is very seldom that a dead calm prevails all day and can make his arrangements for a day weeks beforehand whereas the stream fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river it is quite another matter to arrange for a days river fishing if one is looking forward to a holiday at a date some weeks ahead providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best a common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from the bow of the same boat of all the absurd beliefs as to loch fishing this is one of the most absurd try it give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance again it is said that the boatman has as much to do with catching trout in a loch as the angler well we dont deny that in an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing

for catholics the question of evolution touches on all the most important topics the nature of god and his work in the world the nature of life and the status of man in the universe it is also a subject of perennial controversy and confusion some see the darwinian theory of evolution as a major agent in discrediting the church s doctrine on creation undermining biblically based morality and the concept of human exceptionalism others regard darwinian theory as compatible with biblical faith and catholic tradition has the church itself evolved or are there certain truths that are permanent and irreplaceable fr michael chaberek is a polish dominican who has studied creation doctrine from old and new testament accounts to the church fathers to the medieval scholastics especially st thomas aquinas to the vatican s internal and public papers of the 19th and 20th centuries and on into our own times and the pronouncements of recent popes his new book gathers all doctrinal statements on evolution and presents the history of the engagement of catholicism with natural science since darwin presented his theory in 1859 what he finds is a clear path that gradually became twisted and over grown his exploration of that path is both scholarly and engrossing finally a book that tells the full story of catholic reflections and magisterial statements down through the centuries on issues of creation and evolution from the meditations of the ancient church fathers to the statements of popes pelagius i and leo xiii there are many hidden treasures to be found here fr chaberek combines historical philosophical and theological scholarship in a book that is both comprehensive and engaging this book will be an eye opener for many and will quickly become the standard and essential work on the subject robert stackpole director john paul ii institute of divine mercy in catholicism and evolution fr michael chaberek surveys perennial catholic teaching plumbs the depths of catholic philosophy and historical theology and analyzes the best scientific evidence to date in the process he shows that certain elements of darwinian evolution are not only incompatible with catholic belief but largely lacking in evidence he shows also that despite her clear historical teaching the contemporary church lacks an unambiguous statement of how catholics should understand this question i expect this to become the definitive book on catholicism and evolution jay w richards co

author of the privileged planet editor of god and evolution darwin and his contemporaries thought the cell was a simple blob of jelly protoplasm modern science has discovered the exact opposite that astoundingly sophisticated technology undergirds life father michael chaberek probes the implications of this and other surprising developments in his erudite study of catholicism s collision with darwinism michael behe author of darwin s black box catholicism and evolution is a thorough exposition of the history of the debate over evolution especially the theory s proponents and opponents within the catholic church this book should be on the shelves of any concerned with this subject or indeed any who would like to fully grasp the controversy s roots in the church ann gauger senior research scientist biologic institute fr chaberek has done catholics and all christians a great service by describing the progression of the present controversy over creation intelligent design and theistic evolution from the bible and early days of christianity until today his book will open eyes bruce chapman founding fellow discovery institute fr michael chaberek o p s t d is a member of the polish dominican province with a doctorate in fundamental theology from cardinal stefan wyszynski university in warsaw

when most people think about catholicism and science they will automatically think of one of the famous events in the history of science the condemnation of galileo by the roman catholic church but the interaction of catholics with science has been and is far more complex and positive than that depicted in the legend of the galileo affair understanding the natural world has always been a strength of catholic thought and research from the great theologians of the middle ages to the present day and science has been a hallmark of catholic education for centuries catholicism and science a volume in the greenwood guides to science and religion series covers all aspects of the relationship of science and the church how catholics interacted with the profound changes in the physical sciences natural philosophy and biological sciences natural history during the scientific revolution how catholic scientists reacted to the theory of evolution and their attempts to make evolution compatible with catholic theology and the implications of roman catholic doctrinal and moral teachings for neuroscientific research and for investigation into genetics and cloning the volume includes primary source documents a glossary and timeline of important events and an annotated bibliography of the most useful works for further research

or river it is quite another matter to arrange for a days river fishing if one is looking forward to a holiday at a date some weeks ahead providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best a common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from the bow of the same boat of all the absurd beliefs as to loch fishing this is one of the most absurd try it give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance again it is said that the boatman has as much to do with catching trout in a loch as the angler well we dont deny that in an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing

science and faith can and do support each other science and christianity are often presented as opposites when in fact the order of the universe and the complexity of life powerfully testify to intelligent design with this comprehensive resource that includes the latest research you ll witness how the findings of scientists provide compelling reasons to acknowledge the mind and presence of a creator featuring more than 45 entries by top caliber experts you ll better understand how scientific concepts like intelligent design are supported by evidence the scientific findings that support the history and accounts found in the bible the biases that lead to scientific information being presented as a challenge rather than a complement to christianity whether you re looking for answers to your own questions or seeking to explain the case for intelligent design to others the comprehensive guide to science and faith is an invaluable apologetic tool that will help you explore and analyze the relevant facts research and theories in light of biblical truth
