this book is the result of a long friendship of a broad international co operation and of a bold dream it is the summary of work carried out by the authors and several other wonderful people during more than 15 years across 3 continents in the course of countless meetings workshops and discussions it shows that neither language nor distance can be an obstacle to close scientific cooperation when there is unity of goals and true collaboration when we started we had very different approaches to handling the mysterious almost magical world of asynchronous circuits some were more theoretical some were closer to physical reality some were driven mostly by design needs in the end we all shared the same belief that true electronic design automation research must be solidly grounded in formal models practically minded to avoid excessive complexity and tested in the field in the form of experimental tools the results are this book and the cad tool petrify the latter can be downloaded and tried by anybody bold or desperate enough to tread into the clockless but not lawless domain of small scale asynchronicity the url is [lsi upc esr j ordic petrify](http://lsi.upc.es/~jordi/petrify) we believe that asynchronous circuits are a wonderful object that abandons some of the almost militaristic law and order that governs synchronous circuits to improve in terms of simplicity energy efficiency and performance
