wikipedia

**polymer wikipedia** Mar 26 2024 a polymer ' p o l i m e r is a substance or material consisting of very large molecules called macromolecules composed of many repeating subunits due to their broad spectrum of properties both synthetic and natural polymers play essential and ubiquitous roles in everyday life

polymer definition properties types and applications Feb 25 2024 a polymer is a class of natural and synthetic substances composed of very large molecules natural polymers are the major building blocks of living organisms including proteins polyamides polynucleotides rna dna and lignins coniferyl alcohol compounds various natural and man made minerals also qualify as polymers

polymer description examples types material uses Jan 24 2024 polymer any of a class of natural or synthetic substances composed of very large molecules called macromolecules that are multiples of simpler chemical units called monomers polymers make up many of the materials in living organisms including for example proteins cellulose and nucleic acids moreover they constitute the basis of such

**explainer what are polymers science news explores** Dec 23 2023 polymer a substance made from long chains of repeating groups of atoms manufactured polymers include nylon polyvinyl chloride better known as pvc and many types of plastics natural polymers include rubber silk and cellulose found in plants and used to make paper for example

**what is a polymer live science** Nov 22 2023 polymers are materials made of long repeating chains of molecules the materials have unique properties depending on the type of molecules being bonded and how they are bonded some polymers

*what are polymers iupac international union of pure and* Oct 21 2023 polymers are substances made of macromolecules molecules with a high molar mass composed of repeating units

**8 7 properties of polymers chemistry libretexts** Sep 20 2023 8 7 properties of polymers page id learning objectives know the properties of polymers based on their molecular and intermolecular structures know the relationship between degree of crystallinity to physical properties of polymers the physical properties of a polymer such as its strength and flexibility depend on

**30 6 polymer structure and physical properties chemistry** Aug 19 2023 30 synthetic polymers expand collapse global location 30 6 polymer structure and physical properties page id polymer crystallinity to account for the physical differences between the different types of polymers the nature of the aggregate macromolecular structure or morphology of each substance must be considered

**16 7 polymers chemistry libretexts** Jul 18 2023 16 7 polymers page id anonymous libretexts learning objectives define the terms monomer and polymer draw the structure of a polymer from its monomer among other applications organic chemistry has had a huge impact on the development of modern materials called polymers

**polymer chemistry wikipedia** Jun 17 2023 viscosity classification see

also references polymer chemistry portion of backbone of nylon 6 6  
polymer chemistry is a sub discipline of chemistry that focuses on the structures of chemicals chemical synthesis and chemical and physical properties of polymers and macromolecules

**polymer definition and examples** thoughtco May 16 2023 a polymer is a large molecule made up of chains or rings of linked repeating subunits which are called monomers polymers usually have high melting and boiling points because the molecules consist of many monomers polymers tend to have high molecular masses

**how are polymers made** scientific american Apr 15 2023 july 27 1998 3 min read how are polymers made the sciences frank n kelley dean of the college of polymer science and polymer engineering at the university of akron provides the

**plastic polymers synthetic recycling** britannica Mar 14 2023 polymers are chemical compounds whose molecules are very large often resembling long chains made up of a seemingly endless series of interconnected links

*major industrial polymers types examples facts* Feb 13 2023 pvc silicone major industrial polymers chemical compounds used in the manufacture of synthetic industrial materials in the commercial production of plastics elastomers man made fibres adhesives and surface coatings a tremendous variety of polymers are used there are many ways to classify these compounds

*what are some examples of polymers* thoughtco Jan 12 2023 a polymer is a large molecule that is made up of repeating subunits connected to each other by chemical bonds do you need some examples of polymers here is a list of materials that are natural and synthetic polymers plus some examples of materials that are not polymers at all natural polymers

polymers for advanced technologies wiley online library Dec 11 2022 journal overview polymers for advanced technologies is published in response to recent significant changes in the patterns of materials research and development worldwide attention has been focused on the critical importance of materials in the creation of new devices and systems

*introduction to monomers and polymers in chemistry* thoughtco Nov 10 2022 updated on june 26 2019 a monomer is a type of molecule that has the ability to chemically bond with other molecules in a long chain a polymer is a chain of an unspecified number of monomers essentially monomers are the building blocks of polymers which are more complex type of molecules

**polymers classification types uses properties and** Oct 09 2022 structure types properties polymers and their monomers polymerization reactions molecular mass of polymers uses of polymers faqs polymers are created by the process of polymerization wherein their constituent elements called monomers are reacted together to form polymer chains i e 3 dimensional networks forming the polymer bonds

polymer fundamentals chemistry libretexts Sep 08 2022 1130 polymers are long chain giant organic molecules are assembled from many smaller molecules called monomers polymers consist of many repeating monomer units in long chains sometimes with branching or cross linking between the chains a polymer is analogous to a necklace made from many small beads monomers

**list of synthetic polymers wikipedia** Aug 07 2022 brand names summary chart plastic identification codes see also references list of synthetic polymers some familiar household synthetic polymers include nylons in textiles and fabrics teflon in non stick pans bakelite for electrical switches polyvinyl chloride pvc in pipes etc
