## Moore's Paradox

2014-10-29

representationalism grasps the meaning and grammar of linguistic expressions in terms of reference that is as determined by the respective objects concepts or states of affairs they are supposed to represent and by the internal structure of the content they articulate as a consequence the semantic and grammatical properties of linguistic expressions allegedly reflect the constitution of the objects they refer to questions concerning the meaning of particular linguistic expressions are supposed to be answerable by investigating the metaphysics of the corresponding phenomena accordingly questions of the meaning of psychological concepts are turned into questions of the nature of psychological states concerned with moore s paradox representationalist approaches lead into an investigation of the state of affairs

supposedly described by moore paradoxical assertions and thus eventually into investigations concerning the metaphysics of belief this book argues that this strategy necessarily yields both a wrong solution to moore s paradox and an inadequate conception of the meaning of the expression i believe turning to the metaphysics of belief is of no use when it comes to understanding either the meaning of the expression i believe or the logic of avowals of belief instead it proposes to focus on the role they play in language the ways in which they are used in practice

an argument that communication is a cooperative activity between agents who together consciously and intentionally construct the meaning of their interaction in cognitive pragmatics bruno bara offers a theory of human communication that is both formalized through logic and empirically validated through experimental data and clinical studies bara argues that communication is a cooperative activity in which two or more agents together consciously and intentionally construct the meaning of their interaction in true communication which bara distinguishes from the mere transmission of information all the actors must share a set of mental states bara takes a cognitive perspective investigating communication not from the viewpoint of an external observer as is the practice in linguistics and the philosophy of language but from within the mind of the individual bara examines communicative interaction through the notion of behavior and dialogue games which structure both the generation and the comprehension of the communication act either language or gesture he describes both standard communication and nonstandard communication which includes deception irony and as if statements failures are analyzed in detail with possible solutions explained bara investigates communicative competence in both evolutionary and developmental terms tracing its emergence from hominids to homo sapiens and defining the stages of its development in humans from birth to adulthood he correlates his theory with the neurosciences and explains the decay of communication that occurs both with different types of brain injury and with alzheimer s disease throughout bara offers supporting data from the literature and his own research the innovative theoretical framework outlined by bara will be of interest not only to cognitive scientists and neuroscientists but also to anthropologists linguists and developmental psychologists

2016-04-21

many translation solutions often called procedures techniques or strategies have been proposed over the past 50 years or so in french chinese russian ukrainian english spanish german japanese italian czech and slovak this book analyzes criticizes and compares them proposing a new list of solutions that can be used in training translators to work between many languages the book also traces out an entirely new history of contemporary translation studies showing for example how the russian tradition was adapted in china how the impact of transformational linguistics was resisted and how scholarship has developed an intercultural metalanguage over and above the concerns of specific national languages the book reveals the intensely political nature of translation theory even in its most apparently technical aspects the lists were used to advance the agendas of not just linguistic nationalisms but also state regimes this is a history in which hitler stalin and mao all played roles communist propaganda and imperialist evangelism were both legitimized ukrainian advances in translation theory were forcefully silenced in the 1930s the cold war both stimulated the application of transformational grammar and blocked news of russian translation theory french translation theory was conscripted into the agenda of japanese exceptionalism and much else
