this book has been written for those who must work with and give care to the dying our discussion is not simple narrative or description it is a rendition of reality informed by a rather densely woven and fairly abstract theoretical scheme this scheme evolved gradually during the course of our research the second audience for this volume is social scientists who are less interested in dying than they are in useful substantive theory our central concern is with the temporal aspects of work the theory presented here may be useful to social scientists interested in areas far removed from health medicine or hospitals the training of physicians and nurses equips them for the technical aspects of dealing with illness medical students learn not to kill patients through error and to save lives through diagnosis and treatment but their teachers put little or no emphasis on how to talk with dying patients how or whether to disclose an impending death or even how to approach the subject with the wives husbands children and parents of the dying students of nursing are taught how to give nursing care to terminal patients as well as how to give post mortem care but the psychological aspects of dealing with the dying and their families are virtually absent from training although physicians and nurses are highly skilled at handling the bodies of terminal patients their behavior to them otherwise is actually outside the province of professional standards much if not most nontechnical conduct toward and in the presence of dying patients and their families is profoundly influenced by common sense assumptions essentially untouched by professional or even rational considerations or by current advancement in social psychological knowledge the process of dying in hospitals is much affected by professional training and codes and by the particular conditions of work generated by hospitals as places of work a third important consideration in interpreting dying as a temporal process is that dying is a social as well as a biological and psychological process the term social underlines that the dying person is not simply leaving life unless he dies without kin or friends and in such a way that his death is completely undiscovered his death is recorded his dying is inextricably bound up with the life of society however insignificant his particular life may have been or how small the impact his death makes upon its future course this aspect of dying is treated in relationship to what the authors call status passage time for dying is an illumination of the temporal features of dying in hospitals—related both to the work of hospital personnel and to dying itself as a social process barney g glaser is the founder of the grounded theory institute in mill valley california and has also been a research sociologist at the university of california medical center san francisco he is the author or coauthor of several books including the grounded theory perspective ii and experts versus laymen a study of the patsy and the subcontractor published by aldine transaction anselm l strauss 1916 1996 was emeritus professor of sociology at the university of california san francisco he was the author of numerous books including professions work and careers mirrors and masks the search for identity and creating sociological awareness collective images and symbolic representations all published in new editions by transaction

in time and death carol white articulates a vision of martin heidegger s work which grows out of a new understanding of what he was trying to address in his discussion of death acknowledging that the discussion of this issue in heidegger s major work being and time is often far from clear white presents a new interpretation of heidegger which short circuits many of the traditional criticisms white claims that we are all in a better position to understand heidegger s insights after fifty years because they have now become a part of the conventional wisdom of common opinion his view shows up in accounts of knowledge in the physical sciences in the assumptions of the social sciences in art and film even in popular culture in general but does so in ways ignorant of their origins now that these insights have filtered down into the culture at large we can make heidegger intelligible in a way that perhaps he himself could not white presents the best possible case for heidegger making him more intelligible to those people with a long acquaintance with his work those with a long aversion to it and in particular to those just starting to pursue an interest in it white places the problems with which heidegger is dealing in the context of issues in contemporary anglo american philosophy in order to better locate him for the more mainstream audience the language and approach of the book is able to accommodate the novice but also offers much food for thought for the heidegger scholar

an in depth look at how mortuary cultures and issues of death and the dead in africa have developed over four centuries in my time of dying is the first detailed history of death and the dead in africa south of the sahara focusing on a region that is now present day ghana john parker explores mortuary cultures and the relationship between the living and the dead over a four hundred year period spanning the seventeenth to twentieth centuries parker considers many questions from the african historical perspective including why people die and where they go after death how the dead are buried and mourned to ensure they continue to work for the benefit of the living and how perceptions and experiences of death and the ends of life have changed over time from exuberant funeral celebrations encountered by seventeenth century observers to the brilliantly conceived designer coffins of the late twentieth century parker shows that the peoples of ghana have developed one of the world s most vibrant cultures of death he explores the unfolding background of that culture through a diverse range of issues such as the

symbolic power of mortal remains and the dominion of hallowed ancestors as well as the problem of bad deaths vile bodies and vengeful ghosts parker reconstructs a vast timeline of death and the dead from the era of the slave trade to the coming of christianity and colonial rule to the rise of the modern postcolonial nation with an array of written and oral sources in my time of dying richly adds to an understanding of how the dead continue to weigh on the shoulders of the living

a new 2024 translation of martin heidegger s major work being and time sein und zeit originally published in 1927 in multiple publications this edition contains a new afterword by the translator a timeline of heidegger s life and works a philosophic index of core heideggerian concepts and a guide for terminology across 19th and 20th century existentialists this translation is designed for readability and accessibility to heidegger s enigmatic and dense philosophy complex and specific philosophic terms are translated as literally as possible and academic footnotes have been removed to ensure easy reading being and time presents a complex philosophical discourse on the nature of being sein and time zeit focusing in particular on the temporal existentialist concept of dasein a term that combines the german words for to be sein and there da this classic philosophic work examines the traditional metaphysical understanding of being arguing that this understanding typically based on the idea of a constant presence fails to account for the temporal and existential dimensions of being heidegger proposes that an understanding of being requires an analysis of dasein which is characterized not only by its existence but also by its being in the world and its temporal existence the concept of dasein is central to the his argument emphasizing that dasein is always already situated in a world and its understanding of being is shaped by its temporal existence this perspective challenges traditional metaphysical notions of being as static and unchanging proposing instead that being is fundamentally temporal and connected to human existence and understanding as the title suggests heidegger sees the question of being as indistinguishable from time arguing that newtonian conceptions of time as a series of now points are inadequate for understanding the being of dasein his ontochronology argues that the existential and ontological analysis of dasein reveals a more fundamental concept of time one that is integral to the structure of being itself the text further elaborates on the idea of thrownness and several other existentialist themes thrownness is one of the three conditions that signifies dasein s immersion in the world where it finds itself already entangled in a web of relations and meanings this thrownness combined with dasein s inherent being toward death underscores the existential condition of human beings framing their existence as a continual engagement with their own finitude and the possibilities of their being heidegger posits that

understanding the nature of being requires a fundamental rethinking of both being and time dogmatically stating that the true nature of being can only be grasped through an understanding of the temporality that characterizes the existence of being
