HSC PDHPE 2011

in the debate regarding what constitutes teachers work academics and bureaucrats continue to speak for teachers with teachers voices rarely heard and not accorded equal recognition the role of research in teachers work addresses this imbalance by privileging teachers voices as they narrate their experiences of engaging in systematic inquiry the book embeds the teacher narratives within the scholarly debates about the nature of knowledge and the nature of professional practice scanlon examines the knowledge teachers create through their research and how that knowledge is perceived by others within the school community this book can be read as a companion volume to scanlon s 2015 routledge publication my school or as a standalone exploration of teachers own narratives of engaging in action research together these two books are unique in contemporary writing on schools representing one of the only comprehensive longitudinal studies of a low socioeconomic secondary school from the perspective of those who learn and teach therein this book enables teachers to be part of the scholarly conversation about their work and the place of research in that work as such it should be essential reading for academics teacher educators and postgraduates in the field of education it should also be of interest to policymakers and teachers

PD, Health and PE 2005

this report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke many surgeon general s reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies mechanisms of disease are important because they may provide plausibility which is one of the guideline criteria for assessing evidence on causation this report specifically reviews the

evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke this evidence is relevant to understanding how smoking causes disease to identifying those who may be particularly susceptible and to assessing the potential risks of tobacco products
