It is often said that the construction professional has to be a jack of all trades and master of all. This text covers a wide range of subjects reflecting the breadth of knowledge needed to understand the dynamics of this large and complex industry. This edition includes updated chapters on planning and scheduling, a new chapter addressing linear scheduling methods, material regarding the historical background of construction as a profession, and includes an instructor resource of solutions to the end of chapter review exercises. This text has become a standard course text at many universities. The first four editions have enjoyed wide success as an introductory treatment of the subjects which are critical to success in the construction industry. This fifth edition preserves the features that have been most appreciated by its users throughout the years and adds suggestions provided by instructors and students through formal surveys and informal feedback to the authors.

in these competitive and turbulent times project organisations face severe challenges despite the advancement of project management tools and techniques the rate of project failure exceeds that of success regardless of calls for further empirical studies on the role of project leadership researchers struggle to find the best leadership styles for project success new digital transformation phenomena have forced organisations to offer more autonomy and decision making authority to those at lower hierarchical levels in this scenario top management support plays a facilitator role to the best of the researcher s knowledge no past studies have examined these critical project success factors simultaneously in a project environment embedded in the theories of contingency goal setting and social cognition this study raised the hypothesis that project managers leadership styles impact project success via the mediation of goal clarity empowerment and self leadership as well as the moderation of top management support data was collected by administering a cross sectional survey to 289 project organisations in the it sector the results demonstrated that project managers transactional leadership style does not impact project success because goal clarity has an insignificant association with project success however the transformational leadership style showed a positive impact on project success because empowerment significantly and positively relates to project success the project manager s empowering leadership style was also found to positively influence project success through followers self leadership additionally top management support revealed a significant moderating role by strengthening the relationship between empowerment and project success this study successfully fills theoretical gaps by introducing a novel moderated mediation model the findings also offer useful insights to practitioners by revealing that project managers transformational leadership and empowering leadership are needed to enhance and encourage employee empowerment and self leadership and ultimately secure project success
