Mercer's Textbook of Orthopaedics and Trauma Tenth edition 2012-02-24 among the standard oncology modalities surgical oncology is singular in that it lacks a separate board certification or even an added qualification mechanism card carrying surgical oncologists are certified by the american board of surgery as are all other general surgeons what distinguishes the surgical oncologist is a set of cognitive skills rather than a specific armamentarium of surgical techniques this different conceptual framework is derived from extensive additional training that leads to an in depth understanding of the natural history and biologic behavior of the various solid tumor systems equipped with this perspective the surgical oncologist is particularly well positioned to integrate the various available therapeutic modalities into a coherent care program for the solid tumor patient as a central theme the chapters of this book demonstrate that increasingly sophisticated diagnostic and staging approaches are helping to move chemotherapy and radiotherapy into the preoperative neoadjuvant setting this fundamental alteration is based on the awareness that even early stage solid tumor disease is frequently systemic at the time of presentation at least on a subclinical level and although the primary tumor may be controllable by surgery with radiotherapy the uncontrolled and initially clinically unapparent distant disease ultimately determines patient survival the other perspective driving the neoadjuvant approach is an emerging awareness that for most solid tumor systems neoadjuvant treatment responses can facilitate less mutilating surgery with comparable levels of local disease control
