nonparametric statistics is a type of statistical analysis that makes minimal assumptions about the underlying distribution of the data being studied often these models are infinite dimensional rather than finite dimensional as is parametric statistics 1

## **non parametric statistics widely used in social sciences**

Dec 19 2022

non parametric statistics is a statistical method that does not require the data to follow a specific distribution it is used when the assumptions of parametric statistics are not met or when the data is categorical or ordinal non parametric methods are based on ranks or frequencies of the data rather than the actual values
