given the near silence in technological and business history about post world war ii socialist enterprises this book gives voice to a generation of communist china s managers entrepreneurs cadres and workers from the liberation to the early 1970s using recently opened online archival resources it details and assesses the course of technical and organizational experimentation at state owned cooperative and private enterprises as the prc strove to construct a socialist economy through trial and error initiatives core questions treated are how did chinese enterprises operate evolve experiment improvise and adjust during the prc s first generation what technological initiatives were crucial to these processes necessarily developed with limited expertise and thin financial resources how could constructing socialism with chinese characteristics have helped lay foundations for the post 1980 chinese miracle as the prc confidently entered the 21st century while soviet and central european socialisms crumbled and what might current day western managers and entrepreneurs learn from chinese practice and performance a half century ago readers can anticipate a granular bottom up analysis of how businesses worked day to day in a planned economy how enterprise practices and technological strategies shifted during the first postwar generation how managers and technicians emerged after the capitalist exodus how organizations experimented and adapted and how the controversies and convulsions of the prc s early decades fashioned durable technical and organizational capabilities
