an early work that lays the foundation for establishing a polemical dimension to psychoanalysis we certainly have the unconscious that we deserve an unconscious for specialists ready made for an institutionalized discourse i would rather see it as something that wraps itself around us in everyday objects something that is involved with day to day problems with the world outside it would be the possible itself open to the socius to the cosmos from the machinic unconscious essays in schizoanalysis in his seminal solo authored work the machinic unconscious originally published in french in 1979 félix guattari lays the groundwork for a general pragmatics capable of resisting the semiotic enslavement of subjectivity concluding that psychoanalytic theory had become part and parcel of a repressive capitalist social order guattari here outlines a schizoanalytic theory to undo its capitalist structure and set the discipline back on its feet combining theoretical research from fields as diverse as cybernetics semiotics ethnology and ethology guattari reintroduces into psychoanalysis a polemical dimension at once transhuman transsexual and transcosmic that brings out the social and political the machinic potential of the unconscious to illustrate his theory guattari turns to literature and analyzes the various modes of subjectivization and semiotization at work in proust s in search of lost time

examining the novel as if he were undertaking a scientific exploration in the style of freud or newton casting proust s figures as abstract hyper deterritorialized mental objects guattari maps the separation between literature and science elaborating along the way such major deleuze guattarian concepts as faciality and refrain which would be unpacked in their subsequent a thousand plateaus capitalism and schizophrenia never before available in english the machinic unconscious has for too long been the missing chapter from deleuze and guattari s anti oedipus project the most important political extension of may 1968 and one of the most important philosophical contributions of the twentieth century

the needs of a true competition engine are quite different than those of the engine under the hood of a typical commuter car from the basic design needs to the base component materials to the sizes of the flow related hardware to the precision of the machining to the capabilities of each pertinent system very few similarities exist many books exist showcasing how to make street based engines more powerful and or durable this book is different in that it focuses purely on the needs of high rpm high durability high powered racing engines it begins by looking at the raw design needs and then shares how these needs are met at the various phases of an engine's development assembly testing and tuning this book features reviews of many popular modern tools techniques products and testing data collecting machinery showing the proper way to use such tools how to accurately collect data and how to use the data effectively when designing an engine is critical information not readily available elsewhere the special needs of a competition engine aren't commonly discussed and the many secrets competition engine builders hold closely are openly shared on the pages here authored by veteran author john baechtel competition engine building stands alone as a premier guide for enthusiasts and

students of the racing engine it also serves as a reference guide for experienced professionals anxious to learn the latest techniques or see how the newest tools are used baechtel is more than just an author as he holds or has held several world records at bonneville additionally his engines have won countless races in many disciplines including road racing and drag racing
