Shadow Banking and Market Discipline on Traditional Banks 2017-12-22 we present a model in which shadow banking arises endogenously and undermines market discipline on traditional banks depositors ability to re optimize in response to crises imposes market discipline on traditional banks these banks optimally commit to a safe portfolio strategy to prevent early withdrawals with costly commitment shadow banking emerges as an alternative banking strategy that combines high risk taking with early liquidation in times of crisis we bring the model to bear on the 2008 financial crisis in the united states during which shadow banks experienced a sudden dry up of funding and liquidated their assets we derive an equilibrium in which the shadow banking sector expands to a size where its liquidation causes a fire sale and exposes traditional banks to liquidity risk higher deposit rates in compensation for liquidity risk also weaken threats of early withdrawal and traditional banks pursue risky portfolios that may leave them in default policy interventions aimed at making traditional banks safer such as liquidity support bank regulation and deposit insurance fuel further expansion of shadow banking but have a net positive impact on financial stability financial stability can also be achieved with a tax on shadow bank profits

Marketplace Lending, Financial Analysis, and the Future of Credit 2015-12-08 this paper presents a model of a banking industry with heterogeneous banks that delivers predictions on the relationship between banks risk of failure market structure bank ownership and banks screening and bankruptcy costs these predictions are explored empirically using a panel of individual banks data and ownership information including more than 10 000 bank year observations for 133 non industrialized countries during the 1993 2004 period four main results obtain first the positive and significant relationship between bank concentration and bank risk of failure found in boyd de nicolò and al jalal 2006 is stronger when bank ownership is taken into account and it is strongest when state owned banks have sizeable market shares second conditional on country and firm specific characteristics the risk profiles of foreign state owned banks are significantly higher than not

significantly different from those of private domestic banks third private domestic banks do take on more risk as a result of larger market shares of both state owned and foreign banks fourth the model rationalizes this evidence if both state owned and foreign banks have either larger screening and or lower bankruptcy costs than private domestic banks banks differences in market shares screening or bankruptcy costs are not too large and loan markets are sufficiently segmented across banks of different ownership

Thailand Banking and Financial Market Handbook Volume 1 Strategic Information and Regulations 2009-03-30 this paper investigates whether developing and emerging market countries can implement monetary policies similar to those used by advanced countries during the recent global crisis injecting significant amounts of money into the financial system without facing major short run adverse macroeconomic repercussions using panel data techniques the paper analyzes episodes of financial turmoil in 16 latin america during 1995 2007 the results show that developing and emerging market countries should be cautious because injecting money on a large scale into the financial system may fuel further macroeconomic instability increasing the chances of simultaneous currency crises

Bank Ownership, Market Structure and Risk 2007-09 this edited volume offers a study of national banking systems and explains how banking developed in the years preceding the international financial crisis that erupted in 2007 its analysis of market based banking shows the impact of the financial crisis in eleven developed economies including all of the g7 economies

Serbia Banking and Financial Market Handbook Volume 1 Strategic Information and Basic Laws 2013-08-01 following the covid shock supervisors encouraged banks to use capital buffers to support the recovery however banks have been reluctant to do so provided the market expects a bank to rebuild its buffers any draw down will open up a capital shortfall that will

weigh on its share price therefore a bank will only decide to use its buffers if the value creation from a larger loan book offsets the costs associated with a capital shortfall using market expectations we calibrate a framework for assessing the usability of buffers our results suggest that the cases in which the use of buffers make economic sense are rare in practice The effects of financial liberalization and new bank entry on market structure and competition in turkey 1997 this book was written at a time when the market for government stocks in london the gilt edged market of the title had undergone a period of rapid innovation in the forms of its instruments index linked stocks variable rate stocks and other new types and of methods of issue this had been the response of a government that had needed to fund a massive public sector borrowing requirement despite its attempts to slash public expenditure in the same period the opening of the london international financial futures exchange liffe with its 20 year gilt contract had introduced a new method for hedging risk for investment managers this book charts and analyses these developments
