## **Towards Free Trade in Agriculture *2013-11-13***

agriculture seems to be a difficult sector to manage for most governments developing countries face tough dilemmas in deciding on appropriate price policies to stimulate food production and maintain stable preferably low prices for poor consumers governments in developed countries face similar difficult decisions they are called upon to give income guarantees to farmers whose incomes are unstable and relatively low when compared to those in the nonagricultural sector these guarantees often lead to ever increasing budgetary outlays and unwanted agricultural surpluses high prices make new investments and the application of new technologies more attractive than world prices warrant and a process is set in motion where technological innovation attains a momentum of its own in turn requiring price policies that maintain their rates of return surpluses are disposed of with subsidies in domestic markets or in the international market price competition reduces the market share of other exporters who may be efficient producers unless they are willing to engage in subsidy competition this lowers export earnings and farm incomes or depletes the public resources of developing countries that export competing products retaliatory measures have led to frictions and further distortions of world prices every so often the major agricultural exporters the usa the ec australia or canada accuse one another of unfair intervention though they have agreed to discuss agricultural trade liberalization under gatt negotiations if anything the expenditure on farm support has continued to increase in both the ec and the usa
