in most third world nations importing technology from other countries is considered vital to industrialization and economic development this book examines the processes of technology transfer and development by tracing how hindustan machine tools a public enterprise in india successfully collaborated with manufacturers from industrialized nations in its growth from a single factory to a diversified industrial complex the author critically analyzes the company s overall strategies for diversification and expansion and its approaches to selecting acquiring absorbing and generating technology and to developing appropriate management he also points to important relationships between policy efficiency and administrative efficiency and discusses socioeconomic and cultural factors that can obstruct the successful development and operation of an industrial enterprise in a developing country

a proven process for machine tool selection installation and maintenance written by an engineer with many years of experience in the industry this practical guide provides a systematic approach to acquiring and setting up machine tools efficiently and cost effectively machine tools specification purchase and installation delivers a step by step plan for choosing the appropriate machine tool to meet your company s requirements and building the foundation that fits the specialized tool and the environment in which it will operate real world examples and helpful checklists are included increase productivity reduce equipment downtime and save money by applying the streamlined methods presented in this valuable resource complete coverage of each phase of the process including budgeting specification procurement layout foundation installation preparation start up maintenance

focusing on the design and implementation of computer based automatic machine tools david f noble challenges the idea that technology has a life of its own technology has been both a convenient scapegoat and a universal solution serving to disarm critics divert attention depoliticize debate and dismiss discussion of the fundamental antagonisms and inequalities that continue to beset america this provocative study of the postwar automation of the american metal working industry the heart of a modern industrial economy explains how dominant institutions like the great corporations the universities and the military along with the ideology of modern engineering shape the development of technology noble shows how the system of numerical control perfected at the massachusetts institute of technology mit and put into general industrial use was chosen over competing systems for reasons other than the technical and economic superiority typically advanced by its promoters numerical control took shape at an mit laboratory rather than in a manufacturing setting and a market for the new technology

was created not by cost minded producers but instead by the u s air force competing methods equally promising were rejected because they left control of production in the hands of skilled workers rather than in those of management or programmers noble demonstrates that engineering design is influenced by political economic managerial and sociological considerations while the deployment of equipment illustrated by a detailed case history of a large general electric plant in massachusetts can become entangled with such matters as labor classification shop organization managerial responsibility and patterns of authority in its examination of technology as a human social process forces of production is a path breaking contribution to the understanding of this phenomenon in american society
