2008

il volume correda un breve percorso espositivo a pannelli testi e immagini per presentare i risultati delle ricerche e degli scavi svolti dal 2011 ad oggi nel sito archeologico antiche mura di jesolo in limine è una poesia di eugenio montale introduce la raccolta ossi di seppia il titolo e la poesia stessa sono sembrati pertinenti a sintetizzare il senso del progetto archeologico sull antica equilo di cui si pubblicano in questo volume i primi risultati in limine significa sulla soglia indica cioè un punto di passaggio un confine e nel nostro caso metaforicamente rimarca il discrimine tra passato e presente il luogo archeologico dove la materia inerte diviene narrazione qui in limine è anche uno spazio fisico preciso quello dell area delle antiche mura luogo anche tangibile della memoria collettiva un luogo ieri come oggi ai margini se l antica equilo era stato un insediamento sul confine instabile tra mare e laguna la moderna jesolo che ne ha ereditato il nome ha lasciato che i ruderi della sua memoria restassero al di fuori del centro abitato nel punto dove la città diventa campagna lì sorgono le rovine dell antica cattedrale lì rimane il reliquiario della comunità come una sorta di giardino dove affonda un morto viluppo di memorie di nuovo montale gli archeologi hanno cercato nel tempo di recuperare quelle memorie e quel passato con pazienza e fatica così il progetto nato qualche anno fa per iniziativa del dipartimento di studi umanistici dell università ca foscari di venezia non costituisce che l ultimo atto di un percorso che ha inizio dalla metà del secolo scorso con gli scavi nell area della cattedrale e nel vicino sito della chiesa di san mauro i contributi che si pubblicano in questa circostanza raccontano e sintetizzano i risultati degli ultimi anni di scavi l interconnessione tra le varie strategie di indagine ci ha consentito di proporre una ricostruzione storico insediativa del sito del tutto inedita e sorprendente

## ***In limine. Storie di una comunità ai margini della laguna***

2018-06-06

this book reconstructs political history from the spatial organization of ancient society challenging the approach favored by classicists

# **Animali tra uomini e dei**

2006

the papers in this volume represent a range of approaches to the study of the symbolic roles of animals in human cultures the theme that unites these papers is their use of a variety of different kinds of evidenceincluding archaeological faunal historical ethnographic artistic and folkloric datain the reconstruction of animal symbolism

# **Power and Place in Etruria**

2020-10-08

this is the third book on material studies in this series on medieval novgorod and its territory and deals with a substantial body of animal bones that has been recovered over the last decade the zooarchaeological evidence is discussed by the editor and a number of other british and russian specialists looking at the remains of mammals birds and fish topics discussed include diet butchery practices the exploitation of fur and skins mortality patterns of mammals and metrical analyses of a wide range of species detailed data sets are provided to enable the reader to make comparisons with their own research but the book is also suitable for those with a more general interest in medieval russian archaeology

## **The Symbolic Role of Animals in Archaeology**

2018-09-10

this volume gathers contributions from scholars from a variety of disciplines to provide a comprehensive assessment of the importance of dogs through history there is a focus on the necessity of an interdisciplinary perspective to fully understand the fundamental role that dogs have played in our past

# Animals and Archaeology in Northern Medieval Russia

2020-04-30

zooarchaeology in practice unites depth of treatment with broad topical coverage to advance methodological discussion and development in archaeofaunal analysis through case studies historical accounts and technical reviews authored by leading figures in the field the volume examines how zooarchaeological data and interpretation are shaped by its methods of practice and explores the impact of these effects at varying levels of investigation contributing authors draw on geographically and taxonomically diverse datasets providing instructive approaches to problems in traditional and emerging areas of methodological concern readers from specialists to students will gain an extensive sophisticated look at important disciplinary issues that are sure to provoke critical reflection on the nature and importance of sound methodology with implications for how archaeologists reconstruct human behavior and paleoecology and broader relevance to fields such as paleontology and conservation biology zooarchaeology in practice makes an enduring contribution to the methodological advancement of the discipline

## Dogs, Past and Present

2023-09-07

the volume summarizes the results of interdisciplinary archaeological investigations at aetokremnos which present the earliest well supported evidence of humans in cyprus and demonstrate the association of cultural remains with extinct endemic pleistocene fauna alan simmons shows that aetokremnos is one of the few archaeological sites where a convincing argument can be made for human involvement in pleistocene extinctions highlights of faunal extinction in an island society are chapters that place the aetokremnos site within a broader context include specialist s reports that demonstrating the need for interdisciplinary contributions describe the chipped stone assemblage of a new culture delineate the huge faunal assemblage recovered and detail how the site was dated list given the controversial nature of the subject matter the volume will appeal to a wide readership including nonanthropological archaeologists trained in anthropological methods researchers and students who specialize in the mediterranean and near east as well as scholars interested in island colonization and adaptations method and theory pleistocene extinctions and interdisciplinary applications will all find much of value in this excellent text

## *Biologia Centrali-americana*

1893

the work presented in this book opens a new window on the history and archaeology of medieval sicily by focusing on the development of human animal relationships from byzantine times to the later middle ages this large scale study of animal bones and teeth relies on the analysis of material from old and recent excavations as well as on a comprehensive review of data available from the literature the results shed light on two major lines of investigation on arab and norman aragonese sicily the influence of different dominations on dietary practices most notably the extent to which the taboo on pork consumption spread in the island under the arab administration and the longer term changes in animal husbandry as a consequence of the technological developments and novel approaches to landscape exploitation introduced by the arabs

## Zooarchaeology in Practice

2017-11-24

the 21 articles collected in this commemorative volume centre on animals in relation to men and gods many articles deal with iconographical issues but epigraphy ceramics and animal bones are subject of research as well although topics range from east to west and from pre historic to modern times the focus is on near eastern archaeology 16 articles in particular with respect to the hellenistic parthian and sasanian periods in this volume material from nimrud nineveh ulug depe selinus termez veh ardashir and hatra is published for the first time

## **Archeologia e Calcolatori, supplemento 1, 2007. Virtual Museums and Archaeology. The Contribution of the Italian National Research Council**

2007-09-01

this book is one of a series of more than 20 volumes resulting from the world archaeological congress september 1986 attempting to bring together not only archaeologists and anthropologists from many parts of the world as well as academics from contingent disciplines but also non academics from a wide range of cultural backgrounds this text looks at human animal interactions especially some of the less well known aspects of the field a number of studies in the book document some of the vast changes humankind has wrought upon the natural environment through the movement of various species of animals around the world these chapters provide contributions to the understanding of contemporary ecological problems especially the deforestation taking place to provide grazing for live stock the 31 contributions offer a shop window of approaches primarily from a biological perspective

## **Faunal Extinction in an Island Society**

1999-07-31

agriculture is the lever with which humans transformed the earth over the last 10 000 years and created new forms of plant and animal species that have forever altered the face of the planet in the last decade significant technological and methodological advances in both molecular biology and archaeology have revolutionized the study of plant and animal domestication and are reshaping our understanding of the transition from foraging to farming one of the major turning points in human history this groundbreaking volume for the first time brings together leading archaeologists and biologists working on the domestication of both plants and animals to consider a wide variety of archaeological and genetic approaches to tracing the origin and dispersal of domesticates it provides a comprehensive overview of the state of the art in this quickly changing field as well as reviews of recent findings on specific crop and livestock species in the americas eurasia and africa offering a unique global perspective it explores common challenges and potential avenues for future progress in documenting domestication

## **Animals and their roles in the medieval society of Sicily from Byzantines to Arabs and from Arabs to Norman/Aragonese (7th-14th c. AD)**

2022-12-30

ever since the discovery of fossil remains of extinct animals associated with flint implements bones and other animal remains have been providing invaluable information to the archaeologist in the last 20 years many archaeologists and zoologists have taken to studying such archaeofaunal remains and the science of zoo archaeology has come into being what was the nature of the environment in which our ancestors lived in which season were sites occupied when did our earliest ancestors start to hunt big game and how efficient were they as hunters were early humans responsible for the extinction of so many species of large mammals 10 20 000 years ago when where and why were certain animals first domesticated when did milking and horse riding begin did the romans influence our eating habits what were sanitary conditions like in medieval england and could the terrible pestilence which afflicted the english in the seventh century ad have been plague these are some of the questions dealt with in this book the book also describes the nature and development of bones and teeth and some of the methods used in zoo archaeology

## ***The Archaeology of Mesoamerican Animals***

2009-03

the egyptians had a peculiarly close relationship with animals as every visitor to egypt who is captivated by the paintings and reliefs of the flora and fauna becomes aware animals seem to penetrate into every aspect of their daily lives and religious beliefs both as wild animals for hunting and domestic animals for food and companionship this encyclopedic and authoritative book focuses on the mammals depicted by the egyptians and the many roles they played as gods magical beings medicine food for sport or simply as pets summaries are given of the present and past distributions of each species and there are extensive notes on their natural history

**Biologia Centrali-americana ...**

1888

it has often been claimed that monsters supernatural creatures with bodies composed from multiple species play a significant part in the thought and imagery of all people from all times the origins of monsters advances an alternative view composite figurations are intriguingly rare and isolated in the art of the prehistoric era instead it was with the rise of cities elites and cosmopolitan trade networks that monsters became widespread features of visual production in the ancient world showing how these fantastic images originated and how they were transmitted david wengrow identifies patterns in the records of human image making and embarks on a search for connections between mind and culture wengrow asks can cognitive science explain the potency of such images does evolutionary psychology hold a key to understanding the transmission of symbols how is our making and perception of images influenced by institutions and technologies wengrow considers the work of art in the first age of mechanical reproduction which he locates in the middle east where urban life began comparing the development and spread of fantastic imagery across a range of prehistoric and ancient societies including mesopotamia egypt greece and china he explores how the visual imagination has been shaped by a complex mixture of historical and universal factors examining the reasons behind the dissemination of monstrous imagery in ancient states and empires the origins of monsters sheds light on the relationship between culture and cognition

**The Walking Larder**

2014-10-30

in recent years scholars have emphasized the need for more holistic subsistence analyses and collaborative publications towards this endeavor have become more numerous in the literature however there are relatively few attempts to qualitatively integrate zooarchaeological animal and paleoethnobotanical plant data and even fewer attempts to quantitatively integrate these two types of subsistence evidence given the vastly different methods used in recovering and quantifying these data not to mention their different preservational histories it is no wonder that so few have undertaken this problem integrating zooarchaeology and paleoethnobotany takes the lead in tackling this important issue by addressing the methodological limitations of data integration proposing new methods and innovative ways of using established methods and highlighting case studies that successfully employ these methods to shed new light on ancient foodways the volume challenges the perception that plant and animal foodways are distinct and contends that the separation of the analysis of archaeological plant and animal remains sets up a false dichotomy between these portions of the diet in advocating qualitative and quantitative data integration the volume establishes a clear set of methods for 1 determining the suitability of data integration in any particular case and 2 carrying out an integrated qualitative or quantitative approach

***Documenting Domestication***

2006-06-20

integrated qualitative or quantitative approach

**The Archaeology of Animals**

2012-11-12

in passato gli animali hanno avuto un ruolo fondamentale nella vita dell uomo fornendogli cibo protezione compagnia svago agevolazione nel movimento e di questa lunga interazione uomo animale rimangono tracce nei documenti letterari epigrafici archivistici e iconografici ma soprattutto negli scavi archeologici che ne restituiscono i resti il libro racconta tre millenni di storia di animali e uomini a roma partendo dai resti animali studiati in quarant anni di ricerche e rinvenuti nei numerosissimi scavi archeologici che sono stati effettuati nell area urbana e nel territorio limitrofo integrando le conoscenze che ne derivano con quelle ricavate dalle altre fonti

***Biologia Centrali-americana***

1903

this volume in the icaz series deals with the technical advances made over the last twenty years in the field of ageing and sexing animal bones the analysis of ancient dna holds great possibilities for sexing certain faunal assemblages though by no means all which is an urgent issue in the study of hunting and animal husbandry it can be assumed that our forebears used more subtle taxonomic criteria than we do today and it is important therefore that we are able to recognise traits that will allow for more accurate classification in terms of calendar age or sex the eighteen papers in this book examine the state of research for various techniques of age sex determination and assess potential future development

**The Mammals of Ancient Egypt**

1998

the analysis of animal bone assemblages from archaeological sites provides much valuable data concerning economic and husbandry practices in the past as well as insights into cultural and symbolic or ritual activity animal palaeopathology can identify diseases in archaeozoological assemblages but little interest has been expressed in investigating and understanding the cultural aspects of the diseases identified such assemblages represent the cumulative effects of human attitudes decisions and influences regarding the keeping care treatment neglect and exploitation of animals which result in a range of conditions non infectious diseases and injuries that can be recognised on ancient skeletal material additionally ever since the domestication of a handful of animal species around 10 000 years ago close physical proximity has been a mutual source of infectious disease and traumatic injury for humans and animals alike shuffling nags lame ducks provides an invaluable guide to the investigation of trauma and disease in archaeozoological assemblages it provides a clear methodological approach and describes and explains the wide range of traumatic lesions infections diseases inherited disorders and other pathological changes and anomalies that can be identified in so doing it explores the impact that man made decisions have had on animals including special aspects of culture that may be reflected in the treatment of diseased or injured animals often incorporating powerful symbolic or religious roles and seeks to enhance our understanding of the relationship between man and beast in the past chapters include history of studying pathological animal remains differences between human and animal palaeopathology methodology growth development and ageing traumatic lesions inflammatory diseases and bone pathological lesions in working animals diseases connected to the environment

**Domestic Animals and Stability in Pre-state Farming Societies**

1992

egyptian animal imagery has long been admired for its beauty and morphological accuracy but the postures and activities of depicted species have received less attention animal behaviour in egyptian art takes a unique approach by documenting the way in which mammals birds reptiles fish amphibians and insects are shown behaving in old kingdom tomb scenes from giza and saqqara and then comparing these representations with current zoological knowledge of contemporary fauna this comprehensive study reveals that the egyptians were acutely aware of the natural behaviour of many different species and that their artists found ingenious ways to depict this within the constraints of their idiosyncratic method of representation

## *Gli animali a Roma. Tre millenni di interazione con l'uomo*

2022-06-30

one of the most significant differences between the new world s major areas of high culture is that mesoamerica had no beasts of burden and wool while the andes had both four members of the camelid family wild guanacos and vicunas and domestic llamas and alpacas were native to the andes south american peoples relied on these animals for meat and wool and as beasts of burden to transport goods all over the andes in this book duccio bonavia tackles major questions about these camelids from their domestication to their distribution at the time of the spanish conquest one of bonavia s hypotheses is that the arrival of the europeans and their introduced old world animals forced the andean camelids away from the pacific coast creating the mistaken impression that camelids were exclusively high altitude animals bonavia also addresses the diseases of camelids and their population density suggesting that the original camelid populations suffered from a different type of mange than that introduced by the europeans this new mange he believes was one of the causes behind the great morbidity of camelids in colonial times in terms of domestication while bonavia

believes that the major centers must have been the puna zone intermediate zones he adds that the process should not be seen as restricted to a single environmental zone bonavia s landmark study of the south american camelids is now available for the first time in english this new edition features an updated analysis and comprehensive bibliography in the spanish edition of this book bonavia lamented the fact that the zooarchaeological data from r s macneish s ayacucho project had yet to be published in response the ayacucho s project s faunal analysts elizabeth s wing and kent v flannery have added appendices on the ayacucho results to this english edition this book will be of broad interest to archaeologists zoologists social anthropologists ethnohistorians and a wide range of students

**Animal Behaviour in Egyptian Art**

2010

of all avian groups birds of prey in particular have long been a prominent subject of fascination in many human societies this book demonstrates that the art and materiality of human engagements with raptors has been significant through deep time and across the world from earliest prehistory to indigenous thinking in the present day drawing on a wide range of global case studies and a plurality of complementary perspectives it explores the varied and fluid dynamics between humans and birds of prey as evidenced in this diverse art historical and archaeological record from their depictions as powerful beings in visual art and their important roles in indigenous mythologies to the significance of their body parts as active agents in religious rituals the intentional deposition of their faunal remains and the display of their preserved bodies in museums there is no doubt that birds of prey have been figures of great import for the shaping of human society and culture however several of the chapters in this volume are particularly concerned with looking beyond the culture nature dichotomy and human centred accounts to explore perspectival and other post humanist thinking on human raptor ontologies and epistemologies the contributors recognize that human raptor relationships are not driven exclusively by human intentionality and that when these species meet they relate to and become with one another this raptor with human focused approach allows for a productive re framing of questions about human raptor interstices enables fresh thinking about established evidence and offers signposts for present and future intra actions with birds of prey
