knowledge grows as ideas are tested against each other agreement is not resolved simply by naming concepts but in the dialectical process of thesis antithesis and synthesis there are many echoes of these debates in the evidence book the contributors make claims for both practitioner wisdom and the voice of experience against this is posed the authority of experimental science and the randomized controlled trial the contributors are concerned in their own ways with collecting ranking and analyzing evidence and using this to deliver evaluations as an expert group they are aware that the concept of evidence has been increasingly important in the last decade as with other concepts it too often escapes precise definition despite this the growing importance of evidence has been advocated with enthusiasm by supporters who see it as a way of increasing the effectiveness and quality of decisions and of professional life the willingness to engage in evidence based policy and the means to do so is heavily constrained by economic political and cultural climates this book is a marvelously comprehensive and utterly unique treatise on evidence based policy it is a wide ranging contribution to the field of evaluation

the open access version of this book available at tandfebooks.com has been made available under a creative commons attribution non commercial no derivatives 3.0 license there has been an enormous increase in interest in the use of evidence for public policymaking but the vast majority of work on the subject has failed to engage with the political nature of decision making and how this influences the ways in which evidence will be used or misused within political areas this book provides new insights into the nature of political bias with regards to evidence and critically considers what an improved use of evidence would look like from a policymaking perspective part i describes the great potential for evidence to help achieve social goals as well as the challenges raised by the political nature of policymaking it explores the concern of evidence advocates that political interests drive the misuse or manipulation of evidence as well as counter concerns of critical policy scholars about how appeals to evidence based policy can depoliticise political debates both concerns reflect forms of bias the first representing technical bias whereby evidence use violates principles of scientific best practice and the second representing issue bias in how appeals to evidence can shift political debates to particular questions or marginalise policy relevant social concerns part ii then draws on the fields of policy studies and cognitive psychology to understand the origins and mechanisms of both forms of bias in relation to political interests and values it illustrates how such biases are not only common but can be much more predictable once we recognise their origins and manifestations in policy arenas finally part iii discusses ways to move forward for those seeking to improve the use of evidence in public policymaking it explores what constitutes good evidence for policy as well as the good use of evidence within policy processes and considers how to build evidence advisory institutions that embed key principles of both scientific good practice and democratic representation taken as a whole the approach promoted is termed the good governance of evidence a concept that represents the use of rigorous systematic and technically valid pieces of evidence within decision making processes that are representative of and accountable to populations served

part of the journal of the royal anthropological institute special issue book series the contributors to this volume share the conviction that anthropology can no longer afford to ignore the importance of the concept of evidence either for the ways in which anthropologists carry out their work methodology or present and justify their findings epistemology demonstrates that evidence is something that all anthropologists must possess shows how the collection of evidence in the field is still without doubt one of the main ingredients of what bronislaw malinowski once referred to as the ethnographer s magic reveals how the concept of evidence has received little sustained attention in print especially when compared to related concepts such as fieldwork truth facts and knowledge argued from a variety of theoretical perspectives and a rarity in its ability to orchestrate some many different and vibrant paradigms and points of view

Roscoe's Digest of the Law of Evidence in Criminal Cases 1874

evidence law is meant to facilitate trials that are fair accurate and efficient and that encourage and protect important societal values and relationships in pursuit of these often conflicting goals common law judges and modern drafting committees have had to perform as amateur applied psychologists their task has required them to employ what they think they know about the ability and motivations of witnesses to perceive store and retrieve information about the effects of the litigation process on testimony and other evidence and about our capacity to comprehend and evaluate evidence these are the same phenomena that cognitive and social psychologists systematically study the rules of evidence have evolved to restrain lawyers from using the most robust weapons of influence and to direct judges to exclude certain categories of information limit it or instruct juries on how to think about it evidence law regulates the form of questions lawyers may ask filters expert testimony requires witnesses to take oaths and aims to give lawyers and factfinders the tools they need to assess witnesses reliability but

without a thorough grounding in psychology is the common sense of the rulemakers as they create these rules always or even usually correct and when it is not how can the rules be fixed addressed to those in both law and psychology the psychological foundations of evidence law draws on the best current psychological research based knowledge to identify and evaluate the choices implicit in the rules of evidence and to suggest alternatives that psychology reveals as better for accomplishing the law's goals

A Treatise on the Law of Evidence as Administered in England and Ireland; with Illustrations from the American and Other Foreign Laws 1858

what is required for something to be evidence for a hypothesis in this fascinating elegantly written work distinguished philosopher of science peter achinstein explores this question rejecting typical philosophical and statistical theories of evidence he claims these theories are much too weak to give scientists what they want a good reason to believe and in some cases they furnish concepts that mistakenly make all evidential claims a priori achinstein introduces four concepts of evidence defines three of them by reference to potential evidence and characterizes the latter using a novel epistemic interpretation of probability the resulting theory is then applied to philosophical and historical issues solutions are provided to the grue ravens lottery and old evidence paradoxes and to a series of questions these include whether explanations or predictions furnish more evidential weight whether individual hypotheses or entire theoretical systems can receive evidential support what counts as a scientific discovery and what sort of evidence is required for it the historical questions include whether jean perrin had non circular evidence for the existence of molecules what type of evidence j j thomson offered for the existence of

The Objects of Evidence 2009-03-30

in the modern age science has been winning its centuries old battle with religion for the mind of man the evidence has long seemed incontrovertible life was merely a product of blind chance a cosmic roll of an infinite number of dice across an eternity of time slowly methodically scientists supplied answers to mysteries insufficiently explained by theologians reason pushed faith off into the shadows of mythology and superstition while atheism became a badge of wisdom our culture freed from moral obligation explored the frontiers of secularism god was dead glynn s arguments for the existence of god put the burden of disproof on those intellectuals who think that the question has long since been settled andrew m greeley but now in the twilight of the twentieth century a startling transformation is taking place in western scientific and intellectual thought at its heart is the dawning realization that the universe far from being a sea of chaos appears instead to be an intricately tuned mechanism whose every molecule whose every physical law seems to have been design from the very first nanosecond of the big bang toward a single end the creation of life this intellectually and spiritually riveting book asks a provocative question is science the long time nemesis of the deity uncovering the face of god patrick glynn lays out the astonishing new evidence that caused him to turn away from the atheism he acquired as a student at harvard and cambridge the facts are fascinating physicists are discovering an unexplainable order to the cosmos medical researchers are reporting the extraordinary healing powers of prayer and are documenting credible accounts of near death experiences psychologists who once considered belief in god to be a sign of neurosis are finding instead that religious faith is a powerful elixir for mental health and sociologists are now acknowledging the destructive consequences of a value free society god the evidence argues that faith today is not grounded in ignorance it is where reason has been leading us all along

According to the Evidence 2012-09-30

the question of whether it is ever permissible to believe on insufficient evidence has once again become a live question greater attention is now being paid to practical dimensions of belief namely issues related to epistemic virtue doxastic responsibility and voluntarism in this book mccormick argues that the standards used to evaluate beliefs are not isolated from other evaluative domains the ultimate criteria for assessing beliefs are the same as those for assessing action because beliefs and actions are both products of agency two important implications of this thesis both of which deviate from the dominant view in contemporary philosophy are 1 it can be permissible and possible to believe for non evidential reasons and 2 we have a robust control over many of our beliefs a control sufficient to ground attributions of responsibility for belief
