for the first time in over 20 years a comprehensive collection of photographs and descriptions of species in the fungal genus fusarium is available this laboratory manual provides an overview of the biology of fusarium and the techniques involved in the isolation identification and characterization of individual species and the populations in which they occur it is the first time that genetic morphological and molecular approaches have been incorporated into a volume devoted to fusarium identification the authors include descriptions of species both new and old and provide protocols for genetic morphological and molecular identification techniques the fusarium laboratory manual also includes some of the evolutionary biology and population genetics thinking that has begun to inform the understanding of agriculturally important fungal pathogens in addition to practical how to protocols it also provides guidance in formulating questions and obtaining answers about this very important group of fungi the need for as many different techniques as possible to be used in the identification and characterization process has never been greater these approaches have applications to fungi other than those in the genus fusarium this volume presents an introduction to the genus fusarium the toxins these fungi produce and the diseases they can cause the fusarium laboratory manual is a milestone in the study of the genus fusarium and will help bridge the gap between morphological and phylogenetic taxonomy it will be used by everybody dealing with fusarium in the third millenium w f o marasas medical research council south africa

the user this manual is designed for the use of geo scientists with an interest and need in developing palaeobiological materials as a potential source of data to meet this objective practical procedures have been formatted for use by both professional and semi professional students with an initial understanding of palaeo biological research aims as a primary source of scientific data i have attempted to provide an explanation and understanding of practical procedures which may be required by students undertaking palaeobiological projects as part

of a degree course the layout of this manual should be particularly beneficial in the instruction and training of geotechnologists and museum preparators graduate students and scientists requiring an outline of a preparation procedure will also be able to use the manual as a reference from which to assess the suitability of a procedure this manual is also intended for use by the committed amateur many of the techniques described in this manual have been devised by non palaeontologists and developed from methods used in archaeology zoology and botany as well as other areas of geology a considerable number of the methods can be undertaken by the amateur and in the case of many of the field procedures should be used this will ensure that specimens and samples can be conserved in such a manner as to facilitate any later research and not invalidate the results of subsequent geochemical analytical techniques which might be employed
