Advances in Information and Communication 2019-02-01 this book presents a remarkable collection of chapters that cover a wide range of topics in the areas of information and communication technologies and their real world applications it gathers the proceedings of the future of information and communication conference 2019 ficc 2019 held in san francisco usa from march 14 to 15 2019 the conference attracted a total of 462 submissions from pioneering researchers scientists industrial engineers and students from all around the world following a double blind peer review process 160 submissions including 15 poster papers were ultimately selected for inclusion in these proceedings the papers highlight relevant trends in and the latest research on communication data science ambient intelligence networking computing security and the internet of things further they address all aspects of information science and communication technologies from classical to intelligent and both the theory and applications of the latest technologies and methodologies gathering chapters that discuss state of the art intelligent methods and techniques for solving real world problems along with future research directions the book represents both an interesting read and a valuable asset

Control System Engineering 2020-11-01 the book is written for an undergraduate course on the feedback control systems it provides comprehensive explanation of theory and practice of control system engineering it elaborates various aspects of time domain and frequency domain analysis and design of control systems each chapter starts with the background of the topic then it gives the conceptual knowledge about the topic dividing it in various sections and subsections each chapter provides the detailed explanation of the topic practical examples and variety of solved problems the explanations are given using very simple and lucid language all the chapters are arranged in a specific sequence which helps to build the understanding of the subject in a logical fashion the book starts with explaining the various types of control systems then it explains how to obtain the mathematical models of various types of systems such as electrical mechanical thermal and liquid level systems then the book includes good coverage of the block diagram and signal flow graph methods of representing the various systems and the reduction methods to obtain simple system from the analysis point of view the book further illustrates the steady state and transient analysis of control systems the book covers the fundamental knowledge of controllers used in practice to optimize the performance of the systems the book emphasizes the detailed analysis of second order systems as these systems are common in practice and higher order systems can be approximated as second order systems the book teaches the concept of stability and time domain stability analysis using routh hurwitz method and root locus method it further explains the fundamentals of frequency domain analysis of the systems including co relation between time domain and frequency domain the book gives very simple techniques for stability analysis of the systems in the frequency domain using bode plot polar plot and nyquist plot methods it also explores the concepts of compensation and d

systems thus the book provides the detailed explanation of modern approach of analysis which is the state variable analysis of the systems including methods of finding the state transition matrix solution of state equation and the concepts of controllability and observability the variety of solved examples is the feature of this book which helps to inculcate the knowledge of the design and analysis of the control systems in the students the book explains the philosophy of the subject which makes the understanding of the concepts very clear and makes the subject more interesting

**Emerging Technologies in Food Science** 2020-06-02 this book provides a comprehensive review of recent innovations in food science that are being used to tackle the challenges of food safety nutritional security and sustainability with a major focus on developing nations like india the book is divided into four main sections the first section provides an overview of the food industry while the second explores food safety in various segments with an interesting account of street food safety an important yet often neglected aspect for safety parameters the third section on nutritional security and sustainability explores various ways of maximizing nutrition and optimizing waste management in the food industry the book closes with a section on emerging technologies and innovations which introduces readers to some of the latest technologies in the food industry including advances in food processing packaging nanotechnology etc the topics have been divided into 25 different chapters which offer a diverse blend of perspectives on innovations in the developing world ideally suited for students and researchers in the food sciences the book is also an interesting read for industry experts in food science and technology
