the beethoven syndrome is the inclination of listeners to hear music as the projection of a composer s inner self this was a radically new way of listening that emerged only after beethoven s death beethoven s music was a catalyst for this change but only in retrospect for it was not until after his death that listeners began to hear composers in general and not just beethoven in their works particularly in their instrumental music the beethoven syndrome hearing music as autobiography traces the rise fall and persistence of this mode of listening from the middle of the eighteenth century to the present prior to 1830 composers and audiences alike operated within a framework of rhetoric in which the burden of intelligibility lay squarely on the composer whose task it was to move listeners in a calculated way but through a confluence of musical philosophical social and economic changes the paradigm of expressive objectivity gave way to one of subjectivity in the years around 1830 the framework of rhetoric thus yielded to a framework of hermeneutics concert goers no longer perceived composers as orators but as oracles to be deciphered in the wake of world war i however the aesthetics of new objectivity marked a return not only to certain stylistic features of eighteenth century music but to the earlier concept of expression itself objectivity would go on to become the cornerstone of the high modernist aesthetic that dominated the century s middle decades masterfully citing a broad array of source material from composers critics theorists and philosophers mark evan bonds s engaging study reveals how perceptions of subjective expression have endured leading to the present era of mixed and often conflicting paradigms of listening

historically informed performance or hip has become an influential and exciting development for scholars musicians and audiences alike yet it has not been unchallenged with debate over the desirability of its central goals and the accuracy of its results the author suggests ways out of this impasse in romantic performance style in this wide ranging study pianist and scholar andrew john snedden takes a step back examining the strengths and limitations of hip he proposes that many problems are avoided when performance styles are understood as expressions of their cultural era rather than as simply composer intention explaining not merely how we play but why we play the way we do and why the nineteenth century romantics played very differently snedden examines the principal evidence we have for romantic performance style especially in translation of score indications and analysis of early recordings finally focusing on the performance styles of liszt and chopin he concludes with a call for the reanimation of culturally appropriate performance styles in romantic repertoire this study will be of great interest to scholars performers and students to anyone wondering about how our performances reflect our culture and about how the romantics played their own culturally embedded music
