## Tea War *2020-04-14*

a history of capitalism in nineteenth and twentieth century china and india that explores the competition between their tea industries tea war is not only a detailed comparative history of the transformation of tea production in the 19th and early 20th centuries but it also intervenes in larger debates about the nature of capitalism global modernity and global history alexander f day occidental college tea remains the world s most popular commercial drink today and at the turn of the twentieth century it represented the largest export industry of both china and colonial india in analyzing the global competition between chinese and indian tea andrew b liu challenges past economic histories premised on the technical divergence between the west and the rest arguing instead that seemingly traditional technologies and practices were central to modern capital accumulation across asia he shows how competitive pressures compelled chinese merchants to adopt abstract industrial conceptions of time while colonial planters in india pushed for labor indenture laws to support factory style tea plantations characterizations of china and india as premodern backwaters he explains were themselves the historical result of new notions of political economy adopted by chinese and indian nationalists who discovered that these abstract ideas corresponded to concrete social changes in their local surroundings together these stories point toward a more flexible and globally oriented conceptualization of the history of capitalism in china and india

## *American Firms in Europe 2009*

this book originated from the idea that performance is what really matters in business and thus in business history yet surprisingly the analysis of performances has been neglected by economic and business historians this book is a first attempt to fill this gap and in doing so provides a totally new approach to european business history rather than bringing together national studies it is based on a single database measuring performance in eight european countries according to identical criteria the study spans the entire twentieth century with particular attention to five benchmark moments the height of the first globalisation on the eve of the first world war the late 1920s boom preceding the great depression the european reconstruction of the mid 1950s the end of golden age in the early 1970s and the height of the second globalisation at the turn of the twenty first century the analysis is based on a sample of 1 225 companies belonging to the three major european economies britain france and germany two large south european latecomers italy and spain two smaller north western countries belgium and sweden and one small nordic country finland performance has been measured using two ratios of profitability return on equity roe and holding return hr thus providing a complementary measure of profitability the former as seen from the firm s perspective the latter from the investor s perspective the book s findings at times surprising at once confirm and infirm widely held assumptions regarding business performance regarding strategy and structure ownership and control old and new industries emerging and advanced economies

how america s individual inventors persisted alongside corporate r d labs as an important source of inventions during the nineteenth century heroic individual inventors such as thomas edison and alexander graham bell created entirely new industries while achieving widespread fame however by 1927 a new york times editorial suggested that teams of corporate scientists at general electric at t and dupont had replaced the solitary garret inventor as the wellspring of invention but these inventors never disappeared in this book eric hintz argues that lesser known inventors such as chester carlson xerox photocopier samuel ruben duracell batteries and earl tupper tupperware continued to develop important technologies throughout the twentieth century moreover hintz explains how independent inventors gradually fell from public view as corporate brands increasingly became associated with high tech innovation focusing on the years from 1890 to 1950 hintz documents how american independent inventors competed and sometimes partnered with their corporate rivals adopted a variety of flexible commercialization strategies established a series of short lived professional groups lobbied for fairer patent laws and mobilized for two world wars after 1950 the experiences of independent inventors generally mirrored the patterns of their predecessors and they continued to be overshadowed during corporate r d s postwar golden age the independents enjoyed a resurgence however at the turn of the twenty first century as apple s steve jobs and shark tank s lori greiner heralded a new generation of heroic inventor entrepreneurs by recovering the stories of a group once considered extinct hintz shows that independent inventors have long been and remain an important source of new technologies
