biology is a branch of science that deals with living organisms and their vital processes biology encompasses diverse fields including botany conservation ecology evolution genetics marine biology medicine microbiology molecular biology physiology and zoology biology is the scientific study of life 1 2 3 it is a natural science with a broad scope but has several unifying themes that tie it together as a single coherent field 1 2 3 for instance all organisms are made up of cells that process hereditary information encoded in genes which can be transmitted to future generations welcome to the biology library biology is the study of life here you can browse videos articles and exercises by topic we keep the library up to date so you may find new or improved content here over time and biology is one of our frankly even in the last hundred years we re just starting to scratch the surface of understanding it but what s really exciting is where the field of biology is going as we understand things at a deeper level at a molecular level we re going to start thinking about how can we even do things like engineer biology openstax biology is the science that studies life what exactly is life this may sound like a silly question with an obvious answer but it is not easy to define life for example a branch of biology called virology studies viruses which exhibit some of the characteristics of living entities but lack others biologists study life at many scales from individual cells to organisms to the entire biosphere planet earth jump in to learn more about the key themes of biology and the properties of living things learn preparing to study biology biology overview what is life the science of biology how do biologists study the world around them what do biologists do additional resources bibliography biology is the study of life the word biology is derived from the greek words bios meaning life and logos meaning study openstax learning objectives by the end of this section you will be able to do the following identify the shared characteristics of the natural sciences summarize the steps of the scientific method species summary species in biology classification comprising related organisms that share common characteristics and are capable of interbreeding this biological species concept is widely used in biology and related fields of study there are more than 20 other different species concepts however some examples human genome summary this free textbook is an openstax resource written to increase student access to high quality peer reviewed learning materials cell in biology the basic membrane bound unit that contains the fundamental molecules of life and of which all living things are composed a single cell may be a complete organism in itself such as a bacterium or it may acquire a specialized function becoming a building block of a multicellular organism biology is a natural science concerned with the study of life and living organisms modern biology is a vast and eclectic field composed of many specialized disciplines that study the structure function growth distribution evolution or other features of living organisms what is biology in simple terms biology is the study of living organisms and their interactions with one another and their environments this is a very broad definition because the scope of
