Empowering 21st Century Learners Through Holistic and Enterprising Learning 2017-04-08

why do we do the things we do over a decade in the making this game changing book is robert sapolsky s genre shattering attempt to answer that question as fully as perhaps only he could looking at it from every angle sapolsky s storytelling concept is delightful but it also has a powerful intrinsic logic he starts by looking at the factors that bear on a person s reaction in the precise moment a behavior occurs and then hops back in time from there in stages ultimately ending up at the deep history of our species and its genetic inheritance and so the first category of explanation is the neurobiological one what goes on in a person s brain a second before the behavior happens then he pulls out to a slightly larger field of vision a little earlier in time what sight sound or smell triggers the nervous system to produce that behavior and then what hormones act hours to days earlier to change how responsive that individual is to the stimuli which trigger the nervous system by now he has increased our field of vision so that we are thinking about neurobiology and the sensory world of our environment and endocrinology in trying to explain what happened sapolsky keeps going next to what features of the environment affected that person s brain and then back to the childhood of the individual and then to their genetic makeup finally he expands the view to encompass factors larger than that one individual how culture has shaped that individual s group what ecological factors helped shape that culture and on and on back to evolutionary factors thousands and even millions of years old the result is one of the most dazzling tours de horizon of the science of human behavior ever attempted a majestic synthesis that harvests cutting edge research across a range of disciplines to provide a subtle and nuanced perspective on why we ultimately do the things we do for good and for ill sapolsky builds on this understanding to wrestle with some of our deepest and thorniest questions relating to tribalism and xenophobia hierarchy and competition morality and free will and war and peace wise humane often very funny behave is a towering achievement powerfully humanizing and downright heroic in its own right

The Opioid Epidemic *2019*

this book is renowned as the most comprehensive yet easy to use guide to referencing available tutors rely on the advice to guide their students in the skills of identifying and referencing information sources and avoiding plagiarism this new edition has new and expanded content especially in relation to latest electronic sources

psychology classics the case of little albert conditioned emotional reactions by john b watson and rosalie rayner is one of the most influential infamous and iconic research articles ever published in the history of psychology commonly referred to as the case of little albert this psychology classic attempted to show how fear could be induced in an infant through classical conditioning originally published in 1920 conditioned emotional reactions remains among the most frequently cited journal articles in introductory psychology courses and textbooks a psychology classic is by definition a must read however most seminal texts within the discipline remain unread by a majority of psychology students a detailed well written description of a classic study is fine to a point but there is absolutely no substitute for understanding and engaging with the issues under review than by reading the authors unabridged ideas thoughts and findings in their entirety bonus material one of the most dramatic aspects of watson and rayner s original study was that they had planned to test a number of methods by which they could remove little albert s conditioned fear responses however as watson noted unfortunately albert was taken from the hospital the day the above tests were made hence the opportunity of building up an experimental technique by means of which we could remove the conditioned emotional responses was denied us this unforeseen turn of events was something that obviously stayed with watson as under his guidance some three years later mary cover jones conducted a follow up study a laboratory study of fear the case of peter which illustrated how fear may be removed under laboratory conditions this additional and highly relevant article is also presented in full the case of little albert has been produced as part of an initiative by the website all about psychology to make important psychology publications widely available all about psychology com
