How to Write & Publish a Scientific Paper 1994 observations plus recipes. It has been said that science is the orderly collection of facts about the natural world. Scientists, however, are wary of using the word 'fact'. 'Fact' has the feeling of absoluteness and universality, whereas scientific observations are neither absolute nor universal. For example, 'children have 20 deciduous baby teeth' is an observation about the real world, but scientists would not call it a fact. Some children have fewer deciduous teeth and some have more. Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood. When they are babies and toddlers, children have less than 20 visible teeth and as they grow older, children begin to lose their deciduous teeth, which are then replaced by permanent teeth. 'Children have 20 deciduous baby teeth' is not even a complete scientific statement. For one thing, the statement 'children have 20 deciduous teeth' does not tell us what we mean by 'teeth'. When we say 'teeth', do we mean only those that can be seen with the unaided eye, or do we also include the hidden unerupted teeth? An observation such as 'children have 20 deciduous teeth' is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically. 'Children have 20 deciduous teeth' must be accompanied by definitions and qualifiers.

Writing Science 2012-01-26 one of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it when a scientific effort fails to independently confirm the computations or results of a previous study some fear that it may be a symptom of a lack of rigor in science while others argue that such an observed inconsistency can be an important precursor to new discovery concerns about reproducibility and replicability have been expressed in both scientific and popular media as these concerns came to light congress requested that the national academies of sciences engineering and medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research reproducibility and replicability in science defines reproducibility and replicability and examines the factors that may lead to non reproducibility and non replicability in research unlike the typical expectation of reproducibility between two computations expectations about replicability are more nuanced and in some cases a lack of replicability can aid the process of scientific discovery this report provides recommendations to researchers academic institutions journals and funders on steps they can take to improve reproducibility and replicability in science
