this monograph discusses scalar verb classes it tests theories of linguistic form and meaning arguments and thematic roles using estonian data the analyses help to understand the aspectual structure of estonian in estonian transitive verbs fall into aspectual classes based on the type of case marking of objects and adjuncts the book relates the morphosyntactic frames of verbs to properties typically associated with adjectives and nouns scalarity and boundedness verbs are divided according to how their aspect is composed some verbs lexicalize a scale which can be bounded either lexically or compositionally aspectual composition involves the unification of features compositionally derived

structures differ according to which of the aspectually relevant dimensions are bounded

while the argument structure of verbs has long been a central issue in linguistic research of all varieties and continues to be a vexed area of research across a wide range of theoretical and empirical approaches the inter disciplinary perspective and dialogue remain largely under explored this collection stems from an interest to find and explore practical tangible points of intersection between theoretical linguists psycholinguists and neurolinguists working on problems related to the representation and processing of verbs and their associated thematic structure the book is organized around three core themes i the basic building blocks of verbal representations and modes of construction of the verb argument complex ii non canonical argument structure realization with a particular focus on object experiencer psych verbs and iii the promises and challenges of neurolinguistic and psycholinguistic investigation into argument structure and the prospects for the future of interdisciplinary research on verb argument structure

while verb classes are a mainstay of linguistic research the field lacks consensus on precisely what constitutes a verb class this book presents a novel approach to verb classes employing a bottom up corpus based methodology and combining key insights from frame semantics construction grammar and valency grammar on this approach verb classes are formulated at varying granularity levels to adequately capture both the shared semantic and syntactic properties unifying verbs of a class and the idiosyncratic properties unique to individual verbs in depth analyses based on this approach shed light on the interrelations between verbs frame semantics and constructions and on the semantic richness and network organization of grammatical constructions this approach is extended to a comparison of change and theft verbs revealing unexpected lexical and syntactic differences across semantically distinct classes finally a range of contrastive german english analyses demonstrate how verb classes can inform the cross linguistic comparison of verbs and constructions

this book develops an approach to the causative alternation that assumes syntactic event decomposition and a configurational theta theory it is couched within the framework of the minimalist program and especially within distributed morphology central to the work is the syntax and semantics of canonical external arguments of causative verbs as well as of oblique causers and causative pps in the context of anticausative verbs in different languages such as germanic romance balkan and caucasian languages the book also develops a new

account of the origin and nature of the morphological marking which is often found on anticausatives across languages the main claim is that this morphology is a reflex of a syntactic way to prohibit the assignment of the external theta role moreover the book develops an account about the origin of the implicit agent in generic middles which often bear the same morphology as marked anticausatives

the last decade has seen a rise in popularity in construction based approaches to grammar the various approaches within the rubric construction grammar all see language as a network of constructions pairings of form and meaning construction grammar as a kind of cognitive linguistics differs significantly from mainstream generative grammar as espoused by chomsky and his followers advocates of construction grammar see it as a psychologically plausible theory of human language as such it is capable of providing a principled account of language acquisition language variation and language change research in construction grammar also includes multidisciplinary cognitive studies in psycholinguistics neurolinguistics and computational linguistics the oxford handbook of construction grammar is the first authoritative reference work solely dedicated to construction grammar divided into five sections the book will be an invaluable resource that students and scholars alike can turn to for a comprehensive account of current work on construction grammar its theoretical foundations and its applications to and relationship with other kinds of linguistic enquiry

this book proposes a novel approach to classification discusses its myriad advantages and outlines how such an approach to classification can best be pursued it encourages a collaborative effort toward the detailed development of such a classification this book is motivated by the increased importance of interdisciplinary scholarship in the academy and the widely perceived shortcomings of existing knowledge organization schemes in serving interdisciplinary scholarship it is designed for scholars of classification research knowledge organization the digital environment and interdisciplinarity itself the approach recommended blends a general classification with domain specific classification practices the book reaches a set of very strong conclusions existing classification systems serve interdisciplinary research and teaching poorly a novel approach to classification grounded in the phenomena studied rather than disciplines would serve interdisciplinary

scholarship much better it would also have advantages for disciplinary scholarship the productivity of scholarship would thus be increased this novel approach is entirely feasible various concerns that might be raised can each be addressed the broad outlines of what a new classification would look like are developed this new approach might serve as a complement to or a substitute for existing classification systems domain analysis can and should be employed in the pursuit of a general classification this will be particularly important with respect to interdisciplinary domains though the impetus for this novel approach comes from interdisciplinarity it is also better suited to the needs of the semantic and a digital environment more generally though the primary focus of the book is on classification systems most chapters also address how the analysis could be extended to thesauri and ontologies the possibility of a universal thesaurus is explored the classification proposed has many of the advantages sought in ontologies for the semantic the book is therefore of interest to scholars working in these areas as well
