One hundred years after the Bauhaus school's founding in 1919, this volume tells its story by interweaving the multiple historiographies of the Bauhaus with the global histories of modernist architecture.

The Future of Architecture 1969

This book was originally devised as a guide for converting from imperial to metric measurements. The new metric handbook has since been totally transformed into a major international handbook of planning and design data. All principal building types are dealt with, ranging from airports, factories and warehouses to schools, churches and libraries. For each such building type, the new metric handbook gives the basic design requirements and all the principal dimensional data. In addition, there are ten chapters dealing with general aspects of building, such as materials, lighting, acoustics and tropical design. It is therefore a unique authoritative reference for solving everyday planning problems. In its various editions, it has sold about 100,000 worldwide and continues to be a reference work belonging on every design office desk or drawing board. A unique authoritative reference for solving everyday planning problems belongs on every design office desk or drawing board.

buildings have often been studied whole in space but never before have they been
studied whole in time how buildings learn is a masterful new synthesis that proposes
that buildings adapt best when constantly refined and reshaped by their occupants and
that architects can mature from being artists of space to becoming artists of time from
the connected farmhouses of new england to i m pei s media lab from satisficing to
form follows funding from the evolution of bungalows to the invention of santa fe
style from low road military surplus buildings to a high road english classic like
chatsworth this is a far ranging survey of unexplored essential territory more than
any other human artifacts buildings improve with time if they re allowed to how
buildings learn shows how to work with time rather than against it

this book is a collection of thirty five texts from the first series of guest writers essays written specifically for the funambulist weblog from june 2011 to november 2012 the idea of complementing lambert s own texts on his blog with those written by others originated from the idea that having friends communicate with each other about their work could help develop mutual interests and provide a platform to address an audience thirty nine authors of twenty three nationalities were given the opportunity to write essays about a part of their work that might fit with the blog s editorial line overall two families of texts emerged collected in two distinct parts in this volume the first part the power of the line explores the legal geographical and historical politics of various places of the world the second part architectural narratives approaches architecture in a mix of things that were once called philosophy literature and art this dichotomy represents the blog s editorial line and can be reconciled by the obsession of approaching architecture without care for the limits of a given discipline this method rather than adopting the contemporary architect s syndrome that consists in talking about everything but being an expert in nothing attempts to consider architecture as something embedded within geo political cultural social historical biological and dromological mechanisms that widely exceed what is traditionally understood as the limits of its expertise

Governing by Design offers a unique perspective on twentieth century architectural history it disputes the primacy placed on individuals in the design and planning process and instead looks to the larger influences of politics culture economics and globalization to uncover the roots of how our built environment evolves in these chapters historians offer their analysis on design as a vehicle for power and as a mediator of social currents power is defined through a variety of forms modernization obsolescence technology capital ergonomics biopolitics and others the chapters explore the diffusion of power through the establishment of norms and networks that frame human conduct action identity and design they follow design as it functions through the body in the home and at the state and international level overall aggregate views the intersection of architecture with the human need for what Foucault termed governmentality societal rules structures repetition and protocols as a way to provide security and tame risk here the conjunction of power and the power of design reinforces governmentality and infuses a sense of social permanence despite the exceedingly fluid nature of societies and the disintegration of cultural memory in the modern era
