Satellite Remote Sensing for Operational Hydrology

1990

traditional means of data gathering are inadequate for present purposes in hydrology and water management thus hydrologists are urgently seeking new ways for supplementing their conventional data supplies satellite remote sensing is being explored increasingly as one possible answer to such data acquisition problems both because of its perceived facility for providing greatly improved space and time coverage of key hydrological observation systems and because the technologies of data acquisiton transmission and processing have become more advanced and more capable although the use of remote sensing especially from satellites is currently less well developed in these contexts than in support of many other earth resource and environmental sciences much successful hydrological research has already been based upon satellite data and in limited but important ways satellite data have already begun to be used in water monitoring and management operations

Guidelines for Computerized Data Processing in Operational

Hydrology and Land and Water Management

1985

floods are by far the most devastating of all weather related hazards in the united states the national weather service nws is charged by congress to provide river and flood forecasts and warnings to the public to protect life and property and to promote the nation s economic and environmental well being such as through support for water resources management as part of a modernization of its technologies and organizational structure the nws is undertaking a thorough updating of its hydrologic products and services and the activities that produce them the national weather service modernization committee of the national research council undertook a comprehensive assessment of the nws plans and progress for the modernization of hydrologic and hydrometeorological operations and services the committee's conclusions and recommendations and their related analysis and rationale are presented in this report

Manual on procedures in operational hydrology

with contributions from a panel of researchers from a wide range of fields the chapters of this book focus on evaluating the potential utility and application of high resolution satellite precipitation products in relation to surface hydrology

Operational Hydrology Report

1987

for improved flood management hydrologists in crisis committees need the most current information in a customizable dynamic and geo referenced form to better advise their peers or the public increase of lead time is achieved by providing interactive visual methods in a cartographic monitoring infrastructure allowing hydrologists to retrieve and bundle their desired flood information in a time saving way vast amounts of real time data are valorized by novel methods which facilitate their integrated interactive and individual use in time critical hydrological situations novel data modeling and data access methods are introduced for real time and large time series data the involved problems are tackled by 1 a central spatiotemporal database which handles historical real time and forecast data by 2 a decentralized based cartographic user interface i e by providing maps to access data and by 3 various interactive tools on this interface for map manipulation and data exploration

1991

at head of title world meteorological organization

Statistical Information on Activities in Operational Hydrology

1977

logistics and benefits of using mathematical models of hydrologic and water resource systems is a collection of paper that details the experiences in the operational and logistical aspects of utilizing water resource models the title provides the general report on model structure and classification experiences of the hydrologic engineering center in maintaining widely used hydrologic and water resource computer models and the operational experience of on line hydrological simulation the selection also covers the implementation and application of a suite for the simulation of complex water resource systems in evaluation and planning studies and the use of a groundwater model in the design performance and the assessment and operation of a river regulation scheme the book will be of great use to researchers and

practitioners of hydrological sciences
