environmentalist independent researcher and author gareth patterson has spent his entire adult life working tirelessly for the greater protection of african wildlife and more particularly for that of the lion born in england in 1963 gareth grew up in nigeria and malawi from an early age he knew where his life s path would take him it would be in africa and his life s work would be for the cause of the african wilderness and its wild inhabitants his is an all encompassing african story from his childhood in west and east africa to his study of a threatened lion population in a private reserve in botswana to his work with george adamson celebrated as the lion man of africa we witness gareth s growing commitment to his life s mission this is nowhere more evident than in his account of his life as a human member of a lion pride experiencing life and death through its eyes as he successfully rehabilitated three famous orphaned lion cubs back into a life in the wilds at considerable risk to his own personal safety he exposed the sordid canned lion industry in south africa bringing this shameful practice to international attention after moving to the western cape he took up the fight for the african elephant notably the unique endangered knysna population and published his astonishing findings in his 2009 book the secret elephants perhaps unsurprisingly given the stressful nature of his work gareth suffered a massive physical and mental breakdown in his forties which he discusses here for the first time with an openness that underlines his courage lesser men might have been broken but his lion s heart fought back and he ultimately overcame his illness gareth patterson s long awaited autobiography is a moving account of one man s single minded dedication to the preservation of africa s wildlife it is also a stark reminder that if the human race does not want to lose africa s priceless wild heritage there is no time to waste the lion is my totem animal and this is the story of my life in africa for the lion

this book is about the importance of honesty and trust it is about strategic and competent communication which also comes with suspending judgment before the facts with this kind of communication which could be ritualized or relatable the squirrels were able to be friends with the lions although the parent squirrels doubted the honesty and sincerity of the lion when he told the little squirrel and her mother that he will not only protect them for the sake of his daughter who wanted to be friends with the little squirrel so bad when they met at her mother's farm but he will give them food they can eat for one year that is should the squirrels agree to visit the lions home as the younger lioness requested the squirrels were scared given the lions carnivorous history as designed by nature with the openness of their young daughter her ability to listen and the honesty of the younger lion they killed their fear opened up to the lions and visited their home a gesture that was returned by the lions the lions kept their promise and stayed honest therefore if these animals could understand the importance benefit of honesty trust and keeping promises then human beings can do better we have done better but we need to do more to become best and succeed in our friendships and relationships as individuals and with governments and corporations governments to governments or between nations etc even as we strive to become better and best in our friendships and relationships we must not be scared or worried about failing in the process or making mistakes it is all right to make mistakes so the fear of perfection or imperfection should not deter us from working hard and failing to become best like good and bad or success and failure mistake is part of life in short it is said to be the raw material of success but only if and when we are determined and committed to succeeding and not make deliberate mistakes that could be dangerous and destructive

the habitat nairobi national park lies to the south southeast of the capital of kenya nairobi where the athi plains meet the eastern escarpment of the rift valley these plains form part of

the semi arid highland plateau lying between the coast and the rift valley both the city itself and the park bordering it are a meeting place of two generally distinct types of landscape and climate while to the east southeast are semi arid plains with grasslands and scattered trees the western north western parts are higher hilly cooler more humid and support lush forests the combination of latitude a little over one degree south of the equator and altitude average of 1600 m 5000 5500 ft combine to give nairobi a most equable climate where the temperature varies during the year between about 11 degrees and 27 degrees centigrade mean minimum and mean maximum for eight years however considerable changes are usually experienced within each day and a rise from 14 degrees c at 0600 hours to 22 degrees at 1100 hours is not unusual nairobi park has a unique concentration of wild animals living in their natural habitat less than 10 km from the centre of a modern city of half a million people the only interference with the natural course of events in the park is that normally required for the proper management of a game park such as maintenance of roads and dams and in this particular case partial fencing towards the city

the okavango lion research project is a broad based study in which the problems of genetics reproduction and disease are as important as ecology and behaviour until now most of the

research that has taught us the facts we take for granted about lions has been done in the serengeti but africa is not all composed of endless savannah rather it is a mosaic of savannahs trees and shrubs this diversity of habitats is probably most richly represented in the okavango delta region of botswana with its permanent swamps seasonal river courses and dry floodplains acacia forests and mopane woodlands here a single lion pride territory can include five distinct habitat types and neighbouring prides can inhabit areas radically different in the availability of water and prey the lions of the okavango seem to challenge many of our preconceived notions about these fascinating animals clearly the time has come to take a fresh look at africa s best known predator

course you ve been to the circus you got there just in time to hear the sideshow spieler tell you that there was fortay y y y y five minutes for fun an amusement beforah th beeg show th beeg show would begin fortay y y y five minutes in which to view those stra a a nge people to see the cannibal twins the skeleton dude the fat lady who has taken everay y y y known method of reducing in an attempt to rid herself of her half a ton of flesh but who gets biggah biggah and fattah ladies s s an gents everay living g g breathing g g moment of her life you ve given yourself plenty of time so you think you want to see the menagerie and the lions and tigers and elephants but the first thing you know that sideshow spieler has inveigled you inside the tent and the next thing you know somebody with a fog horn voice is yelling in your ear hurry hurry everaybodi e e e e e th beeg show is starting g g g g then you have to rush through the menagerie and get into your seat before you exactly know what s happened well it s about the same way with the beginning of a book you set yourself to have a lot of fun seeing the main show and then somebody drags you off to a side performance and before you realize it your time for reading s up and all you ve gotten is a lot of advance information as to what you re going to find out if you finish the book i suppose i ve a lot of the boy in me i hate introductions despise em yet in a way they re necessary i ve always wanted to write a book where i could put the introduction at the end or something like that because really an introduction seems terribly necessary but since i couldn t do that i waited until i had finished writing the rest of the book and then i wrote this which i am busily trying to keep from being

an introduction but it seems that there s no way out i might as well break down and confess that s what it is th sideshow th side show w w w w ladies s s s an gents th sideshow while farther on the main performance band is tuning up for the grand d d entrée so if you re like me and detest introductions just let this part of the book slide on by and wait until you ve finished the rest then maybe some day when you haven t anything to do you can come back and see what i ve been doing all this talking about it s simply this i ve often been asked why a circus carries so many animals around with it whether it is merely because it wants to fill up space or because they are cheap or to take up time before the rest of the performance it really is none of these questions like that hurt a circus man s pride he really thinks a lot of his animals and he s terribly proud of the fact that he carries them around the country because he knows that from the fact that he does like animals a great portion of america gains its knowledge of natural history there are comparatively few big zoölogical collections in america and all these are in the big cities especially is this true where jungle animals are exhibited the rest of the country must depend on the circus to make possible a close knowledge of the various beasts of faraway lands and there is hardly a man or woman in america who was reared in a rural community who did not gain his or her early studies in this manner and that pleases the circus man because he always wants to feel that he is something else than merely a purveyor of amusement nor does he do it cheaply for instance the next time the ringling brothers and barnum and bailey circus comes to town you ll find in its menagerie a total of forty four elephants a number of them are babies purchased at an average price of about 2500 apiece when all costs are considered half of them are full grown worth from 5000 to 10 000 each according to their performing ability lump them all at an average of 4000 apiece and you have an investment of 186 000 in elephants to say nothing of the food they eat and of all animals elephants are the champion hay eaters that s one item the four giraffes are another and in case you should desire to purchase a first class giraffe some day just write out a check for 15 000 and then trust to good fortune to get you the animal giraffes are scarce so are hippopotami and rhinoceri and great apes to say nothing of pythons and jungle bred tigers and lions and leopards and other animals of their kind figuring the interest on the investment alone for the number of performance days which are granted to the circus it costs

nearly 2000 a week to carry that menagerie around the country that is the amount the original outlay would earn if it were invested in the ordinary channels of business nor does that include the items of trainers of food of assistants cage men dens horses for transportation railroad equipment and repairs and steam haulage so a menagerie really isn't such a cheap adjunct is it nor is that all a few years ago John Ringling learned that there was a wonderful ape in England he had heard that it was a real gorilla but didn't believe it he went to England and to the home of the man and woman who had reared the beast to health from a disease ridden little thing which had been landed in London from a tramp steamer it was a real gorilla the first one that ever had thrived in captivity John Ringling wanted that animal for his circus it meant that the people of the United States would be given an opportunity to study something which neither the combined efforts of scientists nor the hunting parties of the animal companies of all the world had been able to give he didn't need the gorilla the menagerie was full as it was but there was the urge of the true circus man to bring forth the thing which had not been seen before to present something new it meant a gamble of thousands of dollars he took the chance the check read for 30 000 John Daniel the gorilla was brought to the United States and lived less than a month such are the risks taken by the circus man to keep his menagerie up to the plane which he desires this is not the only instance expeditions have been fostered men sent away from the United States for months even years at a time to gain some special animal perhaps the expedition is a success more often it is a failure but the crowds which throng through the marquee into the menagerie see nothing but the gilded cages and the picket line of elephants giving but little thought to the effort and expense behind it all which worries the circus man not at all what he is after is to get people into that menagerie that in the final analysis is of course the real reason behind the menagerie to help get people into the circus but in doing that a number of other things are accomplished in the first place the rural population is thereby given its knowledge of natural history the farmer's boy and the boy of the city not large enough to support a zoo get their first sight of the lion the tiger the elephant and giraffe and hippopotamus in a circus menagerie with that there comes the inevitable human attribute of making comparisons and following that study comes easier it's much more pleasant to read in the newspaper about some one you know than it is

to read about some one wholly abstract the same is true of animals after a person has seen the tigers in a circus he wants to know more of them that s when the books come in nor is science neglected by the circus it was due to the importation of john daniel by the ringling brothers and barnum and bailey that the anthropologists of new york were able to dissect a gorilla brain and carry on their studies through an actual autopsy upon a specimen of an animal group which has been almost as mysterious as the fabled dodo the same thing was true with a giant animal called casey which was imported several years ago from cape lopez africa by way of australia by a man named fox the animal was a mystery and it still is a mystery it looked like a chimpanzee yet had characteristics and size which marked it as different from any other chimpanzee which ever had come to this country it also had gorilla characteristics yet it was not a gorilla it died on an operating table in tampa florida of acute appendicitis and following its death an autopsy was performed showing surprising indications for one thing the speech centers of the brain displayed remarkable development giving the hint that had the animal lived there might have come the time when it would have been able to speak with the articulation of a low order of humanity other developments showed a close relationship to the human brain at least a tendency in that direction had the circus which exhibited it known all that beforehand it might have advertised it as the missing link but the circus didn t which was perhaps just as well however one thing remains casey was a mystery and to the circus world belongs the credit of bringing into general knowledge an animal which hinted at least of a strange race of ground apes which may yet be discovered in africa showing a development different from that of the chimpanzee and of the gorilla yet combining both and aiding the scientists in their researches into the beginnings of man that casey was a certain type of chimpanzee was of course true but what type and what gave him his peculiar closely human countenance and his great size he was nearly twice as large as his friend and companion biz an ordinary chimpanzee and one saw in them the dissimilarity that one notices between two widely different races of men if casey could only have explained some day another casey may come to america and another following that circus men will bring them when they come and the investigations which follow may cause many a surprising result and by the way the next time you go to the circus just try an experiment and see how much more

real amusement and interest you get out of looking at the animals try a new viewpoint just remember that we are all animals we all belong to the same kingdom with that in mind experiment with the idea of looking at those animals not as just so many mere brutes but as merely a different branch of the animal kingdom to which you belong look upon them as foreigners as visitors to your land from a different shore strange but willing to learn and with far greater perceptive powers perhaps than we have as i have mentioned before the human race is egotistical it likes to believe that it knows everything but a close study of animals will reveal that perhaps they can teach us things and that in their way they may have every bit as much sense as we have a dog you know can understand his master s slightest whim and mood but few indeed are the masters who can understand their dogs from the books
