graphql radically improves the efficiency of web apis reducing the number of requests and the volume of data in transit within your web applications you can amplify the benefits of graphql by adjusting your stack to match graphql's more natural representation of your data as a graph in fullstack graphql applications with grandstack you'll learn to build graph aware end to end web applications using graphql react apollo and the neo4j graph database about the technology over fetching or under fetching data from rest apis makes your applications slow and unreliable especially over weak mobile network connections the graphql query language offers a solution with a new api paradigm reducing loads by constructing precise graph based data requests by adapting your application's design and data store to leverage graphs throughout the stack you decrease friction by using a consistent data model improving developer productivity performance and maintainability the combination of graphql react apollo and neo4j database aka the grandstack provides an easily adoptable end to end solution perfect for building fullstack graphql applications about the book fullstack graphql applications with grandstack teaches you to leverage the power of graphql to create modern apis that streamline data loads by allowing client applications to selectively fetch only the data required grandstack io contributor and graphql foundation member william lyon teaches you everything you need to know to design deploy and maintain a graphql api from scratch and create graph aware fullstack web applications in this project driven book you'll build a complete business reviews application using the cutting edge grandstack learning how the different parts fit together chapter by chapter you'll master creating a graphql service with apollo server modelling a graphql api with graphql type definitions installing the neo4j database on different platforms and more by the time you're done you'll be able to deploy all of the components of a serverless fullstack application in a secure and cost effective way that takes full advantage of graphql's performance capabilities along the way you'll also get tips for applying these techniques to other stacks what's inside

building the backend functionality of a graphql application handling authentication and authorization with graphql implementing pagination and rate limiting in a graphql api create a basic frontend application using react and apollo client about the reader aimed at developers comfortable building web applications using tools like django rails or mean stack and standard sql based databases no experience with graphql or graph databases required about the author william lyon is a software developer at neo4j working on integrations with other technologies and helping users build applications with neo4j he is the creator and maintainer of neo4j graphql js a javascript library for creating graphql apis and is a contributor to grandstack io he serves as neo4j s representative on the graphql foundation
