A Guide to the Exhibition Galleries of the Department of Geology and Palaeontology in the British Museum (natural History) 1884 this book explores the role of phonological templates in early language use from the perspective of usage based

phonology and exemplar models and within the larger developmental framework of dynamic systems theory after analysing children's first words and their adult targets vihanen sets out procedures for establishing the children's later prosodic structures and templates drawing on data from american and british english estonian finnish french italian and welsh she also provides briefer longitudinal accounts of template use in arabic and brazilian portuguese the children are found to begin with simple word forms that match their selected adult targets this is followed by the production of more challenging words adapted to fit the child's existing patterns early accuracy is replaced by later recourse to an inner model a template of a favoured word shape the book also examines the timing fading quantification and function of child phonological templates in addition two chapters focus on the use of templates in adult language in the core grammar and in the more creative morphology of colloquial short forms and hypocoristics in french and estonian and of english rhyming compounds the idea of templates is traced back to its origins in prosodic morphology but its uses are most in evidence in the informal settings of adult language at play throughout the volume the discussion returns to the issues of emergent systematicity the roles of articulatory and memory challenges for children and the similarities and differences in the function of templates for adults as compared with children

Odontology; Or a Treatise on the Comparative Anatomy of the Teeth 1845 einstein shocked the world by revealing that time can be different for different observers this book offers a possible explanation of why it is so it offers a never attempted before approach to understand the secret of time as we all know there is an intimate relationship between time and age of objects but what is this relationship the author dives deep into the possible relationships between time and age of objects animate or inanimate and in turn emerges with a novel concept of time time is a measurement of age the book proposes that time is acquired by age not required for it and thus time is an acquired property of objects the author also proposes that just as length width and height are the measurements of physical extensions of objects their three spatial dimensions and not any independent entities time too being the measurement of their age is not independent of objects in this sense time seems to be the fourth dimension of objects instead of space the book attempts to justify its hypothesis by testing its compatibility with theory of relativity also discussed is the meaning of the so called passage of time and the arrow of time on the basis of the model of time proposed here the meaning of the much debated concept of time travel is thoroughly discussed here and it is proposed that this concept in the sense that we usually take is a myth even if you can manage to reach your future by overcoming all technological limitations as we all know theory of relativity allows it all your friends will be there with you witnessing the same future the only difference will be your clocks will not agree with those of your friends

Odontology... and Microscopic Structure in the Vertebrate Animals 1845 georges louis leclerc le comte de buffon s the epochs of nature originally published as les Époques de la nature in 1778 is one of the first great popular science books a work

of style and insight that was devoured by catherine the great of russia and influenced humboldt darwin lyell vernadsky and many other renowned scientists it is the first geological history of the world stretching from the earth s origins to its foreseen end and though buffon was limited by the scientific knowledge of his era the substance of the earth was not as he asserts dragged out of the sun by a giant comet nor is the sun s heat generated by tidal forces many of his deductions appear today as startling insights and yet the epochs of nature has never before been available in its entirety in english until now in seven epochs buffon reveals the main features of an evolving earth from its hard rock substrate to the sedimentary layers on top from the minerals and fossils found within these layers to volcanoes earthquakes and rises and falls in sea level and he even touches on age old mysteries like why the sun shines in one of many moments of striking scientific prescience buffon details evidence for species extinction a generation before cuvier s more famous assertion of the phenomenon his seventh and final epoch does nothing less than offer the first geological glimpse of the idea that humans are altering the very foundations of the earth an idea of remarkable resonance as we debate the designation of another epoch the anthropocene also featuring buffon s extensive notes justificatives in which he offers further evidence to support his assertions and discusses vanished monstrous north american beasts what we know as mastodons as well as the potential existence of human giants plus an enlightening introduction by editor and translator jan zalasiewicz and historians of science sverker sörlin libby robin and jacques grinevald this extraordinary new translation revives buffon s quite literally groundbreaking work for a new age
