## Tactical SEO

2016-08-03

tactical seo is a practical guide to understanding the opportunities challenges and overlooked potential that seo can bring to any webpage or website it challenges the plethora of technical process driven and time sensitive best practice seo guides and gives readers insights into the big picture value that can be derived from understanding the underlying principles of seo clear and inclusive in tone tactical seo offers proven tactics to follow that are built around the core principles of optimization and that therefore stay consistent in spite of continually evolving digital technologies including many real world case studies and examples tactical seo gives readers a framework to cultivating their own seo capabilities this framework can be applied in any online business regardless of industry or online niche to enhance discoverability and profitability exploring core concepts such as the google ethos ripple creation and mobile marketing tactical seo is the number one go to resource to help marketing professionals and students become experts in this essential field

## *Data Mining and Knowledge Discovery for Big Data*

2013-09-24

the field of data mining has made significant and far reaching advances over the past three decades because of its potential power for solving complex problems data mining has been successfully applied to diverse areas such as business engineering social media and biological science many of these applications search for patterns in complex structural information in biomedicine for example modeling complex biological systems requires linking knowledge across many levels of science from genes to disease further the data characteristics of the problems have also grown from static to dynamic and spatiotemporal complete to incomplete and centralized to distributed and grow in their scope and size this is known as big data the effective integration of big data for decision making also requires privacy preservation the contributions to this monograph summarize the advances of data mining in the respective fields this volume consists of nine chapters that address subjects ranging from mining data from opinion spatiotemporal databases discriminative subgraph patterns path knowledge discovery social media and privacy issues to the subject of computation reduction via binary matrix factorization

## *China-US Rivalry and Regional Reordering in Latin America and the Caribbean*

2024-03-29

this book provides a comprehensive conceptual and analytical framework for understanding the reordering process in the latin american and caribbean lac region driven and shaped by china us rivalry it demonstrates the differences between china us china lac and us lac relations and questions to what extent the lac region can be considered a unified actor exploring broad perspectives such as global governance international institutions trade security policy climate change multilateralism and

regional and global peace and stability the contributors also consider china s belt and road initiative the community of latin american and caribbean states celac and minilateral cooperation sustainable development and business and the role of soft power such as tourism and education in china lac relations this timely and important contribution analyzing the changing regional order in the lac region brought about by china s global rise and increasing hegemonic competition with the us will appeal to scholars and student of international relations international political economy and security studies

daniel j nassar is the author of the best selling book token ring troubleshooting guide which provides the clear and in depth understanding necessary for working in the token ring environment this book is designed for lan system engineers and technical support engineers lan designers and consultants lan managers users on token ring lans and students of computer science and electronic engineering use and installation of local area networks lans has increased dramatically in the past decade and growth in this areas continues if you are a professional network installer or technician you will find token ring troubleshooting guide indispensable

## Token Ring Troubleshooting Guide

1998-12

master the art of machine learning with net and gain insight into real world applications about this book based on net framework 4.6.1 includes examples on asp.net core 1.0 set up your business application to start using machine learning techniques familiarize the user with some of the more common net libraries for machine learning implement several common machine learning techniques evaluate optimize and adjust machine learning models who this book is for this book is targeted at net developers who want to build complex machine learning systems some basic understanding of data science is required what you will learn write your own machine learning applications and experiments using the latest net framework including net core 1.0 set up your business application to start using machine learning accurately predict the future using regressions discover hidden patterns using decision trees acquire prepare and combine datasets to drive insights optimize business throughput using bayes classifier discover more hidden patterns using knn and naive bayes discover even more hidden patterns using k means and pca use neural networks to improve business decision making while using the latest asp.net technologies explore big data distributed computing and how to deploy machine learning models to iot devices making machines self learning and adapting along the way learn about open data bing maps and mbrace in detail net is one of the widely used platforms for developing applications with the meteoric rise of machine learning developers are now keen on finding out how can they make their net applications smarter also net developers are interested into moving into the world of devices and how to apply machine learning techniques to well machines this book is packed with real world examples to easily use machine learning techniques in your business applications you will begin with introduction to f and prepare yourselves for machine learning using net framework you will be writing a simple linear regression model using an example which predicts sales of a product forming a base with the regression model you will start using machine learning libraries available in net framework such as math.net numl.net and accord.net with the help of a sample application you will then move on to writing multiple linear

regressions and logistic regressions you will learn what is open data and the awesomeness of type providers next you are going to address some of the issues that we have been glossing over so far and take a deep dive into obtaining cleaning and organizing our data you will compare the utility of building a knn and naive bayes model to achieve best possible results implementation of kmeans and pca using accord net and numl net libraries is covered with the help of an example application we will then look at many of issues confronting creating real world machine learning models like overfitting and how to combat them using confusion matrixes scaling normalization and feature selection you will now enter into the world of neural networks and move your line of business application to a hybrid scientific application after you have covered all the above machine learning models you will see how to deal with very large datasets using mbrace and how to deploy machine learning models to internet of thing iot devices so that the machine can learn and adapt on the fly style and approach this book will guide you in learning everything about how to tackle the flood of data being encountered these days in your net applications with the help of popular machine learning libraries offered by the net framework

practical recipes and real world examples to help you create custom solutions and automate processes use Power Apps combined with Power Automate. DataVerse the component framework and Power Pages to implement RPA technologies and more key features enhanced with added content on Power Pages. Robotic Process Automation map capabilities for Canvas Apps solutions using mixed reality and much more. Explore a variety of built-in templates to create custom apps for specific business scenarios. Strengthen your enterprise applications with advanced techniques and proven tips using a low code approach. Book description: Power Apps is a low code platform owned by Microsoft. With this platform you can create solutions to solve your business needs while integrating with other components of the Power platform such as Microsoft Power Automate, Microsoft Power BI and others. This book is a handy solution guide to meet many organizational requirements. Microsoft Power Apps Cookbook, Second Edition takes a pragmatic approach where every business scenario is presented in a quick practical and action oriented recipe you will be able to use these instant solutions in your development environment and customize your business apps to meet challenging business needs. This will help you handle real world scenarios and experiences to give you a head start in your Power Apps projects. You will discover various aspects of Power Apps from building Canvas Apps, designing model driven solutions, extending apps with custom connectors and integrating apps with other platforms to the pro developer side including Power Apps component framework and creating website experiences for external users with Power Pages. By the end of this Microsoft Power Apps book you will have gained experience in developing applications using the Power Apps platform and all its features. What you will learn: learn to integrate and test Canvas Apps, design model driven solutions using various features of Microsoft DataVerse, automate business processes such as triggered events, status change notifications and approval systems with Power Automate, implement RPA technologies with Power Automate, extend your platform using maps and mixed reality, implement AI Builder's intelligent capabilities in your solutions, extend your business applications capabilities using Power Apps component framework, create website experiences for users beyond the organization with Microsoft Power Pages. Who this book is for: this book is targeted at information workers and citizen developers wanting to develop custom applications for their organizations or the projects they are undertaking. Traditional app developers will also find this book useful by discovering how to use a rapid application development environment with increased productivity and speed. Readers are expected to have prior exposure to the Microsoft Power platform ecosystem.

for fans of computers and comedy alike an accessible and entertaining look into how we can use artificial intelligence to make smart machines funny most robots and smart devices are not known for their joke telling abilities and yet as computer scientist tony veale explains in your wit is my command machines are not inherently unfunny they are just programmed that way by examining the mechanisms of humor and jokes how jokes actually works veale shows that computers can be built with a sense of humor capable not only of producing a joke but also of appreciating one along the way he explores the humor generating capacities of fictional robots ranging from b 9 in lost in space to tars in interstellar maps out possible scenarios for developing witty robots and investigates such aspects of humor as puns sarcasm and offensiveness in order for robots to be funny veale explains we need to analyze humor computationally using artificial intelligence ai veale shows that joke generation is a knowledge based process a sense of humor is blend of wit and wisdom he notes that existing technologies can detect sarcasm in conversation and explains how some jokes can be pre scripted while others are generated algorithmically all while making the technical aspects of ai accessible for the general reader of course there s no single algorithm or

technology that we can plug in to make our virtual assistants or gps voice navigation funny but veale provides a computational roadmap for how we might get there
