the role of representation in the production of technoscientific knowledge has become a

subject of great interest in recent years in this book sociologist and art critic kathryn

henderson offers a new perspective on this topic by exploring the impact of computer graphic

systems on the visual culture of engineering design henderson shows how designers use

drawings both to organize work and knowledge and to recruit and organize resources political

support and power henderson s analysis of the collective nature of knowledge in technical

design work is based on her participant observation of practices in two industrial settings in

one she follows the evolution of a turbine engine package from design to production and in

the other she examines the development of an innovative surgical tool in both cases she

describes the messy realities of design practice including the mixed use of the worlds of paper

and computer graphics one of the goals of the book is to lay a practice informed groundwork for the creation of more usable computer tools henderson also explores the relationship between the historical development of engineering as a profession and the standardization of engineering knowledge and then addresses the question just what is high technology and how does its affect the extent to which people will allow their working habits to be disrupted and restructured finally to help explain why visual representations are so powerful henderson develops the concept of metaindexicality the ability of a visual representation used interactively to combine many diverse levels of knowledge and thus to serve as a meeting ground and sometimes battleground for many types of workers

the second symposium on processing visible language constituted a different mix of participants from the first greater emphasis was given to the design of language both in its historical development and in its current display and to practical questions associated with machine implementation oflanguage in the interactions of person and computer and in the

characteristics of the physical and environmental objects that affect the interaction another change was that a special session on theory capped the proceedings psychologists remained heavily involved however both as contributors to and as discussants of the work pre sented the motivation of the conferences remains one of bringing together graphic designers engineers and psychologists concerned with the display and acquisition of visible language the papers separately tended to emphasize the one of the three disciplines that mark their authors field of endeavor but are constructed to be general rather than parochial moreover within the three disciplines papers emphasized either the textual or the more pictorial aspects for example a session on writing systems ranged from principles that seem to characterize all such systems to specific papers on ancient egyptian writing modern korean and english shorthand the complementary session on the nontextual media opened with a discussion of general principles of pictorial communication and included papers on communicating

instructions general information or religious belief through designs and other pictorial forms as well as a discussion of misrepresentation
