professional landscapers and all those involved in creating green spaces have long been in need of a book that is a guide to plant specification but also makes sense of plants and their cultivation plant user handbook is for practitioners who are professionally engaged in the use of plants in public commercial and institutional landscapes planting schemes are undertaken on the basis of a binding contract generally between the client who owns or leases the landscape and the implementer the landscape contractor with the designer acting both as specifier and contract administrator within this contractual relationship planting schemes must be implemented to an agreed timetable to manage this procedure efficiently landscape designers and managers need quick access to the factual and scientific background for practical planting design and its implementation through specification writing and contracts the book covers over 20 well defined topics and is written by leading experts in the industry it is arranged into five sections preliminaries to plant use and the landscape managing plant growth on landscape sites establishment and management of trees establishment and management of smaller woody plants establishment and management of herbaceous plants carefully illustrated with diagrams black and white photographs and colour plates this handbook provides a unique resource for professionals wanting to improve their specification skills as well as to explore creative approaches to design and practical implementation

cavitation the result of insufficient pressure in a pump inlet is not only the major cause of loss in pump performance but also of reduced cost effectiveness this practical guide provides straight forward up to the minute advice on all aspects of cavitation and npsh enabling the end user to improve all the factors involved prepared by europump european association of pump manufacturers this book contains the results of years of research work and practical

experience by leading european educational institutions and pump manufacturers to give a valuable unbiased guide which is applicable to all types of rotodynamic pumps and related systems

after nearly a decade of success owing to its thorough coverage abundance of problems and examples and practical use of simulation and design power switching converters enters its second edition with new and updated material entirely new design case studies and expanded figures equations and homework problems this textbook is ideal for senior undergraduate or graduate courses in power electronic converters requiring only systems analysis and basic electronics courses the only text of such detail to also include the use of pspice and step by step designs and simulations power switching converters second edition covers basic topologies basic control techniques and closed loop control and stability it also includes two new chapters on interleaved converters and switched capacitor converters and the authors have added discrete time modeling to the dynamic analysis of switching converters the final two chapters are dedicated to simulation and complete design examples respectively pspice examples and matlab scripts are available for download from the crc site these are useful for the simulation of students designs class slides are also available on the internet instructors will appreciate the breadth and depth of the material more than enough to adapt into a customized syllabus students will similarly benefit from the more than 440 figures and over 1000 equations ample homework problems and case studies presented in this book

in 2002 the international conference on computer aided design iccad celebrates its 20th anniversary this book commemorates contributions made by iccad to the broad field of design automation during that time the foundation of iccad in 1982 coincided with the growth of large scale integration the sharply increased functionality of board level circuits led to a major demand for more powerful electronic design automation eda tools at the same time lsi grew quickly and advanced circuit integration became widely available this in turn required new tools using sophisticated modeling analysis and optimization algorithms in order to manage the evermore complex design processes not surprisingly during the same period a number of start up companies began to commercialize eda solutions complementing various existing in house efforts the overall increased interest in design automation demanded a new forum for the emerging community of eda professionals one which would be focused on the publication of high quality research results and provide a structure for the exchange of ideas on a broad scale many of the original iccad volunteers were also members of cande computer aided network design a workshop of the ieee circuits and system society in fact it was at a cande workshop that bill mccalla suggested the creation of a conference for the eda professional bill later developed the name

this volume brings together current work on qualitative reasoning its publication reflects the maturity of qualitative reasoning as a research area and the growing interest in problems of reasoning about physical systems the papers present knowledge bases for a number of very different domains including heat flow transistors and digital computation a common theme of all these papers is explaining how physical systems work an important shared criterion is that the behavioral description must be compositional that is the description of a system s behavior must be derivable from the structure of the system this material should be of interest to anyone concerned with automated reasoning about the real physical world

the development of powerful computer algebra systems has considerably extended the scope of problems of scientific computing which can now be solved successfully with the aid of computers however as the field of applications of computer algebra in scientific computing becomes broader and more complex there is a danger of separation between theory systems and applications for this reason we felt the need to bring together the researchers who now apply the tools of computer algebra for the solution of problems in scientific computing in order to foster new and closer interactions casc 99 is the second conference devoted to applications of computer algebra in scientific computing the first conference in this sequence casc 98 was held 20-24 april 1998 in st petersburg russia this volume contains revised versions of the papers submitted by the participants and accepted by the program committee after a

thorough reviewing process the collection of papers included in the proceedings covers various topics of computer algebra methods algorithms and software applied to scientific computing symbolic numeric analysis and solving differential equations efficient computations with polynomials groups matrices and other related objects special purpose programming environments application to physics mechanics optics and to other areas in particular a significant group of papers deals with applications of computer algebra methods for the solution of current problems in group theory which mostly arise in mathematical physics

the handbook of homotopy theory provides a panoramic view of an active area in mathematics that is currently seeing dramatic solutions to long standing open problems and is proving itself of increasing importance across many other mathematical disciplines the origins of the subject date back to work of henri poincaré and heinz hopf in the early 20th century but it has seen enormous progress in the 21st century a highlight of this volume is an introduction to and diverse applications of the newly established foundational theory of categories the coverage is vast ranging from axiomatic to applied from foundational to computational and includes surveys of applications both geometric and algebraic the contributors are among the most active and creative researchers in the field the 22 chapters by 31 contributors are designed to address novices as well as established mathematicians interested in learning the state of the art in this field whose methods are of increasing importance in many other areas
