the fundamental principle of piezotronics and piezo phototronics were introduced by wang in 2007 and 2010 respectively due to the polarization of ions in a crystal that has non central symmetry in materials such as the wurtzite structured zno gan and inn a piezoelectric potential piezopotential is created in the crystal by applying a stress owing to the simultaneous possession of piezoelectricity and semiconductor properties the piezopotential created in the crystal has a strong effect on the carrier transport at the interface junction piezotronics is for devices fabricated using the piezopotential as a gate voltage to control charge carrier transport at a contact or junction the piezo phototronic effect uses the piezopotential to control the carrier generation transport separation and or recombination for improving the performance of optoelectronic devices such as photon detector solar cell and led the functionality offered by piezotronics and

piezo phototronics are complimentary to cmos technology there is an effective integration of piezotronic and piezo phototronic devices with silicon based cmos technology unique applications can be found in areas such as human computer interfacing sensing and actuating in nanorobotics smart and personalized electronic signatures smart mems nems nanorobotics and energy sciences this book introduces the fundamentals of piezotronics and piezo phototronics and advanced applications it gives guidance to researchers engineers and graduate students
