thanks to its best known use any mention of cannabis tends to bring up jokes about the munchies or debates about marijuana and legalized drug use but this not so innocent flowering plant was one of the first to be domesticated by humans and it has been used in spiritual therapeutic and even punitive applications ever since in addition to its more recreational purpose despite all the hoopla surrounding cannabis however we actually understand relatively little about it in the human and ecological past in cannabis chris duvall explores the botanical and cultural history of one of our most widely distributed crops presenting an even handed look at this heady little plant providing a global historical geography of cannabis duvall discusses the manufacture of hemp and its role in rope making clothing and paper as well as cannabis s use as oil and fuel his focus though is on its most prevalent use as a psychoactive drug without advocating for either the prohibition or legalization of the drug duvall analyzes a wide range of

works to offer a better understanding of both stances and moreover the diversity of human cannabis relationships across the world in doing so he corrects the overly simplistic portrayals of cannabis that have dominated discourse on the subject arguing that we need to understand the big picture in order to improve how the plant is managed worldwide richly illustrated and highly accessible cannabis is an essential read to understand the rapidly evolving debate over the legalization of marijuana in the united states and other countries

animals have existed on earth for many hundreds of millions of years in that time they have evolved into a great variety of forms exploiting nearly every habitat the planet has to offer in the dark depths of the

oceans in the seemingly inhospitable polar regions in the driest deserts even within the bodies of other animals there are animal species that have developed unique and extraordinary means of surviving and thriving extraordinary animals an encyclopedia of curious and unusual animals is an exploration of those members of the animal kingdom who possess strange and bizarre adaptations that allow them to survive in the most extreme environments or whose complex lives can only be said to be bewildering from the tar baby termite to the blue whale from the harpy eagle to the naked mole rat these species reflect the exceptionally broad spectrum of life showing just how diverse the animal kingdom is extraordinary animals has been thoroughly researched for scientific accuracy but is accessibly written in everyday language each entry includes a description of the animal an explanation of its odd behavior other interesting scientific and trivial facts and black and white illustrations in addition a fun and interactive go look section encourages readers to go look for the animals in the outside world

2001

a 150 year history of the planning construction and development of all forms of mass transportation in brooklyn new york how we got to coney island is the definitive history of mass transportation in brooklyn covering 150 years of extraordinary growth cudahy tells the complete story of the trolleys street cars steamboats and railways that helped create new york s largest borough and the remarkable system that grew to connect the world s most famous seaside resort with brooklyn new york city across the river and ultimately the rest of the world includes tables charts photographs and maps praise for how we got to coney island this is an example of a familiar and decidedly old fashioned genre of transport history it is primarily an examination of the business politics of railway development and amalgamation in brooklyn and adjoining districts since the mid nineteenth century the journal of transport history

Consumer Sourcebook

2006

81 2 x 10since publication this title has proved to be very popular for both the serious lens user wishing to understand more about his lenses as well as the leica enthusiast considering which lens would be suitable to add to his outfit do you know your coma from your aberrations if yes then part 2 of erwin puts new book will be of considerable interest to you either way you may find this section easier to understand than you expect the illustrations and diagrams do help part 1 goes into the optical history of e leitz wetzlar and the leica camera of solms in detail with all the personalities involved this section is well illustrated with some new pictures the commercial demands are always battling with the perfectionists at leica who created some of the world s most famous lenses part 2 is an optical digression explaining the lens and glass design features problems and terms and the continual battle to ensure that leica users end up with the highest possible standard of lens part 3 is the largest part of the book puts has tested leica lenses from 1925 to date each lens in most cases with diagram is detailed with its performances at the critical apertures

The Observatory, Volume 19

2016-05-19

the book discusses the modeling of induction and synchronous machines aimed at the synthesis of dedicated control strategies the first part focuses on induction machines imms and starts with the analysis of the principle of operation which is based on the induction phenomenon it then establishes the a b c model assuming a sinusoidal spatial repartition of the air gap flux density a linear magnetic circuit and constant phase resistors the a b c model enables the establishment of a state representation of the induction machine then the park transformation is introduced and applied to the im a b c model leading to its park one which is then used to analyze the im steady state operation the chapter also includes a case study dealing with the doubly fed induction machine which is widely integrated in wind power generating systems following the introduction of the continuous development of synchronous machines sms the second part establishes the a b c model for salient pole machines then the park transformation is applied to the established a b c model leading to the park one the section highlights the formulation and analysis of the electromagnetic torque with its synchronizing and reluctant components investigated in terms of the torque angle subsequently it characterizes the operation at i maximum torque and ii unity power factor before focusing on the flux weakening approaches that could be implemented in sms considering both smooth and salient pole topologies lastly it presents a case study dealing with an investigation of the main features of the electric drive unit of a hybrid propulsion system and the possibility of their improvement with an emphasis on the extension of the flux weakening range

Zero Configuration Networking

2006

the book offers a comprehensive overview of the multifaceted matters that arise in the process of financing commercial aircraft it reviews the different topics on a high level basis and then explains the terminology used for each particular area of specialization
