this volume 1 of part ii considers the factors that make science progress it lays out the differences between normal science and pseudoscience by showing the importance of the scientific method in the advancement of science it introduces the concept of truth in science by raising the point that even though truth is based on the scientific method can science be true can it depict reality the author focuses on modern science which he thinks was born thanks to the scientific revolution which started with galileo galilei and led to the industrial revolution the impacts of the latter is analyzed in light modernism modernization and modernity all three linked to scientific progress the book also talks about the newtonian scientific leap by analyzing particularly the then social and political fabrics of england and albert einstein by showing how he changed history according to the author our very physical world can help us understand scientific progress so he explains among other things the structure of atoms and molecules the role of physics in the understanding of our universe quantum mechanics and the importance of higgs boson on the other hand the book is a stunning revelation of how important information is to scientific progress to make his point the author first talks about john vincent atanasoff as the father of computer thanks to the invention of his abc computer and then alan turing as the father of modern computer thanks to his turing test and his views on artificial

intelligence both men played a momentous role in the digital revolution and in the information age according to the book finally the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material
