## Proceedings of the 2015 International Conference on Materials Engineering and Environmental Science (MEES2015)

2016

although the kyoto protocol an international agreement to address global climate change has been regarded by many as an unsuccessful treaty both politically and environmentally it stands as one of the world s few truly global agreements why did such a diverse group of countries decide to sign and or ratify the treaty why did they choose to do so at different times and in different ways what explains their foreign policy behavior amy below s book builds off the increasing significance of climate change and uses the kyoto protocol as a case study to analyze foreign policy decision making in latin america below s study takes a regional perspective in order to examine why countries in latin america made disparate foreign policy choices when they were faced with the same decision the book looks at the decisions in argentina mexico and venezuela via a process tracing method below uses information obtained from primary and secondary documents and elite interviews to help reconstruct the processes and augments her reconstruction with a content analysis of conference of the parties speeches by presidents and country delegates the book

complies with convention in the field by arguing that systemic national and individual level factors simultaneously impact foreign policy decisions but makes the additional claim that role theory most accurately accounts for relationships between variables environmental politics and foreign policy decision making in latin america considers a variety of factors on individual national and international levels of analysis and show that the foreign policy decisions are best viewed through the prism of role theory the book also draws conclusions about the value of role theory in general and about environmental foreign policy decisions in developing countries which will be of value to both policy makers and academics
