the volume includes selected and reviewed papers from the 3rd conference on ignition systems for gasoline engines in berlin in november 2016 experts from industry and universities discuss in their papers the challenges to ignition systems in providing reliable precise ignition in the light of a wide spread in mixture quality high exhaust gas recirculation rates and high cylinder pressures classic spark plug ignition as well as alternative ignition systems are assessed the ignition system being one of the key technologies to further optimizing the gasoline engine

for decades scientists and engineers have been working to increase the efficiency of internal combustion engines for spark ignition engines two technical questions in particular are always in focus 1 how can the air fuel mixture be optimally ignited under all possible conditions 2 how can undesirable but recurrent early and self ignitions in the air fuel mixture be avoided against the background of the considerable efficiency increases currently being sought in the context of developments and the introduction of new fuels such as hydrogen methanol ammonia and other hydrogen derivatives as well as biofuels these questions are more in the focus than ever in order to provide a perfect exchange platform for the community of combustion process and system developers from research and development iav has organized this combined conference chaired by marc sens the proceedings presented here represent the collection of all the topics presented at the event and are thus intended to serve as an inspiration and pool of ideas for all interested parties

this book focuses on gasoline compression ignition gci which offers the prospect of engines with high efficiency and low exhaust emissions at a lower cost a gci engine is a compression ignition ci engine which is run on gasoline like fuels even on low octane gasoline making it significantly easier to control particulates and nox but with high efficiency the state of the art development to make gci combustion feasible on practical vehicles is highlighted e g on overcoming problems on cold start high pressure rise rates at high loads transients and hc and co emissions this book will be a useful guide to those in academia and industry

accelerated testing most types of laboratory testing proving ground testing intensive field flight testing any experimental research is increasingly a key component for predicting of product s process performance trends in development accelerated testing for automotive and aerospace engineering provides a completely updated analysis of the current status of accelerated testing

including the basic general directions of testing methods and equipment development how one needs to study real world conditions for their accurate simulation and successful accelerated testing describes in details the role of accurate simulation in the development of automotive and aerospace engineering shows that failures are most often found in the interconnections step by step instructions and examples this is the only book presently available that considers in detail both the positive and negative trends in testing development for prediction quality reliability safety durability maintainability supportability profit and decreasing life cycle cost recalls complaints and other performance components of the product the author presents new ideas and offers a unique strategic approach to obtaining solutions which were not possible using earlier his methodology has been widely implemented continue to be adopted throughout the world and leads to advance society through product improvement that can reduce loss of life injuries financial losses and product recalls it also covers new ideas in development positive and cost effective trends in testing development especially accelerated reliability and durability testing art adt which includes integration accurate simulation of field flight influences safety human factors and leads to successful prediction of product performance during pre design design manufacturing and usage for the product s service life engineers researchers teachers and postgraduate advanced students who are involved in automotive and aerospace engineering will find this a useful reference on how to apply the accelerated testing method to solve practical problems in these areas explains the similarities and differences between accelerated testing technologies used in automotive aerospace and other engineering fields provides a step by step guide for the accurate physical simulation of field conditions for test subjects includes case studies of accelerated testing in automotive and aerospace engineering

safe and effective structural firefighting requires a complex thought process it is not a simple matter of how to decisions depend on many factors from the type of building to the likelihood of occupancy to the water supply the third edition of structural firefighting strategy and tactics leads readers through all phases of planning evaluation and implementation to enable them to effectively manage structure fire incidents safe and effective manner regardless of size or complexity the third edition has been revised to thoroughly cover the practical applications and limitations of the latest research from underwriters laboratories ul and national institute of standards and technology nist as well as discussion of actual recent fire incidents and what can be learned from them updated statistical information and coverage of the latest applicable standards use of real world examples to reinforce chapter concepts student exercises based on practical and real scenarios by applying the principles described in structural firefighting strategy

and tactics third edition even the most experienced fire officers and incident commanders will be able to utilize their knowledge more effectively at the scene

debriefing is a major component of the job in many high risk industries where errors can have considerable often deadly consequences including combat surgery and aviation although there exists considerable literature on debriefing recent reviews of the literature suggest a shortcomings in the topics researched b paucity of related theory c limitations in the number of empirical studies and d problems in research design there are also recent suggestions that there are surprisingly studies in the scholarly literature that show how to debrief how to teach or learn to debrief what methods of debriefing exists and how effective they are at achieving learning objectives and goals meta analyses reveal substantial variations in research findings e g on the use of video as a means of debriefing that can be traced to the problems this book redresses these problems in that it provides a detailed look at debriefing and assessment the functions of different cognitive artifacts used and a theoretical framework that accounts for the complexity of

flying an aircraft and for the debriefing of the pilots experiences especially under the high stakes condition of their bi annual evaluation for licensing purposes the book provides detailed investigation of flight examiners methods to arrive at assessments of aviation pilot performance it shows and theoretically models why there are good reasons for lower than desired inter rater agreements it offers detailed scenarios of how debriefing can be made to draw maximum benefit for pilot learning that is for the take home messages that will make them better pilots the theoretical framework includes objective factors that determine performance and the subjective experience pilots have while undergoing training and testing in flight simulators

the book includes the papers presented at the conference discussing approaches to prevent or reliably control knocking and other irregular combustion events the majority of today s highly efficient gasoline engines utilize downsizing high mean pressures produce increased knocking which frequently results in a reduction in the compression ratio at high specific powers beyond this the phenomenon of pre ignition has been linked to the rise in specific power in gasoline engines for many years charge diluted concepts with high compression cause extreme knocking potentially leading to catastrophic failure the introduction of rde legislation this year will further grow the requirements for combustion process development as residual gas scavenging and enrichment to improve the knock limit will be legally restricted despite no relaxation of the need to reach the main center of heat release as early as possible new solutions in thermodynamics and control engineering are urgently needed to further increase the efficiency of gasoline engines
