## **Dragon Warrior IV 1992-10-01**

from the basics to advanced techniques 3rd edition for 2016 is new and greatly expanded with over 120 pages of text graphics and illustrations to help you start ivs intravenous cannulation is one of the most difficult skills most rns lvns and emts will learn if you are scared out of your mind about starting ivs you are not alone it is an invasive and often painful procedure that requires both skill and practice to master maybe you are worried about hurting your patient or perhaps you are afraid of appearing incompetent in front of the patient if you are unsuccessful all too often it seems easier to just ask someone else like any skill some will be better than others some will learn faster others it will take more time our goal is to provide you a rapid and easy way to master the iv stick not everyone will become an expert and that s ok but at a minimum we want to impart every professional with the skill and confidence to start a routine uncomplicated iv in their patient whether you are a new grad who needs the essentials or a seasoned professional looking to learn some advanced techniques everyone can always learn something new basics to advanced techniques over 120 pages of text graphics and pictures gaugeschoosing the correct gauge basic anatomy and physiology of veins strategies to distend veins and make them pop out how to choose veins which to avoid a colorful illustrated step by step guide to starting a standard iv 4 methods to threading the catheter 3 approaches to inserting the needle guide to the floating technique visual guide to what you are doing wrong when a vein blows finding and avoiding valves the y bifurcation inserting ivs in the elderly vesicant medications assortment of tips and tricks by the end you will have not just the skills to start an iv but the confidence to go out there and give each patient your two best shots example chapter threading the catheter at this point both the tip of the needle and the tip of the catheter are inside the vein you will now need to thread the rest of the catheter into the vein the catheter is fully inside the vein when only the hub sticks out there are several different methods to advancing the catheter the two handed technique 1 you have already visualized flash lowered your angle advanced 1 2mm and released the tourniquet 2 continue holding the needle in place 3 with your non dominant hand grasp the hub of the catheter and slide it forward into the vein 4 slowly withdraw the needle 5 place your thumb on the hub of the catheter to hold it in place 6 use your index finger to press down above the site to prevent blood from spilling out the single handed technique 1 you have already visualized flash lowered your angle advanced 1 2mm and released the tourniquet 2 continue holding the needle in place 3 use the index finger of the hand that is holding the needle to slide the catheter past the needle 4 continue sliding the catheter until it is fully inside the vein with the above two techniques be careful that you are only advancing the catheter into the vein and not the needle if the catheter is inside the vein it should be relatively easy and painless to advance it unlike the needle the catheter is soft and flexible so it will be difficult to slide it in unless you are inside the vein if the flashback was very small you may feel resistance introduction meet your iv device know your veins make them pop out selecting your site sites to avoid equipment standart technique step by step the floating technique veins that blow valves venipuncture in elderly patients infiltration and extravasation tips and tricks end appendix
