Statistics Using Technology, Second Edition 2015-12-12 although there are many books on mathematical finance few deal with the statistical aspects of modern data analysis as applied to financial problems this textbook fills this gap by addressing some of the most challenging issues facing financial engineers it shows how sophisticated mathematics and modern statistical techniques can be used in the solutions of concrete financial problems concerns of risk management are addressed by the study of extreme values the fitting of distributions with heavy tails the computation of values at risk var and other measures of risk principal component analysis pca smoothing and regression techniques are applied to the construction of yield and forward curves time series analysis is applied to the study of temperature options and nonparametric estimation nonlinear filtering is applied to monte carlo simulations option pricing and earnings prediction this textbook is intended for undergraduate students majoring in financial engineering or graduate students in a master in finance or mba program it is sprinkled with practical examples using market data and each chapter ends with exercises practical examples are solved in the r computing environment they illustrate problems occurring in the commodity energy and weather markets as well as the fixed income equity and credit markets the examples experiments and problem sets are based on the library rsafd developed for the purpose of the text the book should help quantitative analysts learn and implement advanced statistical concepts also it will be valuable for researchers wishing to gain experience with financial data implement and test mathematical theories and address practical issues that are often ignored or underestimated in academic curricula this is the new fully revised edition to the book statistical analysis of financial data in s plus rené carmona is the paul m wythes 55 professor of engineering and finance at princeton university in the department of operations research and financial engineering and director of graduate studies of the bendheim center for finance his publications include over one hundred articles and eight books in probability and statistics he was elected fellow of the institute of mathematical statistics in 1984 and of the society for industrial and applied mathematics in 2010 he is on the editorial board of several peer reviewed journals and book series professor carmona has developed computer programs for teaching statistics and research in signal analysis and financial engineering he has worked for many years on energy the commodity markets and more recently in environmental economics and he is recognized as a leading researcher and expert in these areas

Introductory Statistics 2e (hardcover, Full Color) 2023-12-14 an overview of descriptive and inferential statistics without formulas and computations clear and to the point narrative makes this short book perfect for all courses in which statistics are discussed helps statistics students who are struggling with the concepts shows them the meanings of the statistics they are computing this book is easy to digest because it is divided into short sections with review questions at the end of each section running sidebars draw students attention to important concepts
