medical devices recognized essential principles of safety and performance of
medical devices part 2 general essential principles and additional specific essential
principles for all ivd medical devices and guidance on the selection of standards
the objective of this paper is to offer harmonized essential principles that can be
achieved in the designing and manufacturing of medical devices and in vitro
diagnostic ivd medical devices to assure that they are safe and operate as required
generally the design of a medical device is regulated by the essential principles ep
of safety and performance what this means is that if a device is designed to relieve
pain the the essential principles are safety and performance requirements for
medical devices including in vitro diagnostic ivd devices see schedule 1 of the
therapeutic goods medical devices regulations 2002 manufacturers must
demonstrate that their devices meet all relevant principles essential principles of

safety and performance provide broad high level criteria for the life cycle of medical devices annex a of the guidance addresses the use of standards in meeting the essential principles this annex indicates that consensus standards can provide a greater level of detail and specificity than the essential principles the essential principles of safety and performance general principles 9 principle 1 use of medical devices not to compromise health and safety 9 tga vs fda tga essential principles ensure patient safety tga essential principles explained there s no way around it your medical device organization needs to understand and apply the essential principles mandated by the tga to embed appropriate compliance and to open access to the Australian market on this page introduction supplying medical devices what is a medical device classification of medical devices essential principles pre market assessment conformity assessment of medical devices market authorisation inclusion of medical devices including ivd medical devices in the artg post market assessment of medical device essential principles of safety and performance of medical device consist of 6 general principles that apply to all medical devices and 11 principles of design and manufacturing some of which are relevant to each medical device the manufacturer should apply the following principles in the priority order listed identify known or foreseeable hazards and estimate the associated risks arising from the intended use and foreseeable misuse eliminate risks as far as reasonably practicable through inherently safe design and

manufacture reduce as far as reasonably practicable t the six general principles include the following ones use of medical devices not to compromise health and safety design and construction of medical devices to conform to safety principles medical devices to be suitable for an intended purpose long term safety medical devices not to be adversely affected by transport or storage
