## **Mathematics for the International Student: Worked solutions**

2005

water is the most every day of substances it pours from our taps and falls from  
 the sky we drink it wash with it and couldn't live without it yet on closer  
 examination it is also a very strange substance it is one of only a very small  
 number of molecules which expand when cooled look closer again and water  
 reveals itself as a key to a scientific story on the biggest of canvases water  
 is crucial to our survival life depends on it but it was also fundamental in  
 the origins of life on earth the millions of gallons of water which make up our  
 rivers lakes and oceans originated in outer space how it arrived here and how  
 those molecules of water were formed is a story which takes us back to the  
 beginning of the universe indeed we know more about the depths of space than we  
 do about the furthest reaches of the oceans water has also shaped the world we  
 live in whether it is by gently carving the grand canyon over millennia or in  
 shaping how civilisations were built we have settled our cities along rivers  
 and coasts scientific studies show how we feel calmer and more relaxed when  
 next to water we holiday by the seas and lakes yet one day soon wars may be  
 fought over access to water the water book will change the way you look at  
 water after reading it you will be able to hold a glass of water up to the  
 light and see within it a strange molecule that connects you to the origins of  
 life the birth and death of the universe and to everyone who ever lived
