Pressure Vessel Handbook

1977

popular consensus says that the us rose over two centuries to cold war victory and world domination and is now in slow decline but is this right history's great civilizations have always lasted much longer and for all its colossal power american culture was overshadowed by europe until recently what if this isn't the end in history has begun bruno maçães offers a compelling vision of america's future both fascinating and unnerving from the early american republic he takes us to the turbulent present when he argues america is finally forging its own path we can see the birth pangs of this new civilization in today's debates on guns religion foreign policy and the significance of trump should the coronavirus pandemic be regarded as an opportunity to build a new kind of society what will its values be and what will this new america look like maçães traces the long arc of us history to argue that in contrast to those who see the us on the cusp of decline it may well be simply shifting to a new model one equally powerful but no longer liberal consequently it is no longer enough to analyze america's current trajectory through the simple prism of decline vs progress which assumes a static model america as liberal leviathan rather maçães argues that america may be casting off the liberalism that has defined the country since its founding for a new model one more appropriate to succeeding in a transformed world

Financial Accounting for Local and State School Systems

1981

with so much attention placed upon comfort in the sale of many goods and in relation to musculoskeletal injuries it is surprising that there is no generally accepted notion of comfort or discomfort that allow them to be easily incorporated into the design process because of this lack of a comfort discomfort paradigm industry also lacks a reference linking comfort and design some designers have found that the best way to engineer comfort into their products is to involve the end user in the process comfort and design principles and good practice presents cases that demonstrate the success that companies from five countries around the world have enjoyed by engineering products with comfort in mind the contributors discuss the theory behind ergonomic engineering and demonstrate practice by using case studies presenting these elements together for the first time in one source the text also explores the costs and benefits associated with reducing discomfort in the workplace and increasing comfort in product design whether for designing products

what should every airline and manufacturer know about comfort what can we learn from studies in the scientific literature what do most passengers know about comfort and how can we translate that into interior design where can i find the latest knowledge and research useful for designing aircraft seats although the answers to these questions are available

History of Architecture

1848

the neolithic period is noted primarily for the change from hunter gatherer societies to agriculture domestication and sedentism this change has been studied in the past by archaeologists observing the movements of plants animals and people but has not been examined by looking at the domestic architecture of the time along with tracking the movement of sedentism neolithic houses are also able to show researchers the beginnings of cultural identity group representation through the construction and decoration of these structures additionally as agriculture moved west and north in this era the architecture and material culture shows this change and its significance chapters are arranged chronologically so that authors can address differences and similarities of their region to neighboring ones to ensure continuity authors have framed the chapters around the following considerations construction materials and architectural characteristics how houses facilitated or perpetuated

Transportation of the Sick and Wounded

~~although service level objectives (SLOs) continue to grow in importance~~

there's a distinct lack of information about how to implement them

practical advice that does exist usually assumes that your team already has the infrastructure, tooling, and culture in place. In this book, recognized SLO expert Alex Hidalgo explains how to build an SLO culture from the ground up. Ideal as a primer and daily reference for anyone creating both the culture and tooling necessary for SLO-based approaches to reliability, this guide provides detailed analysis of advanced SLO and service level indicator (SLI) techniques, armed with mathematical models and statistical knowledge to help you get the most out of an SLO-based approach. You'll learn how to build systems capable of measuring meaningful SLIs with built-in across all departments of your organization, define SLIs that meaningfully measure the reliability of a service from a user's perspective, choose appropriate SLO targets including how to perform statistical and probabilistic analysis, use error budgets to help your team have better discussions and make better data-driven decisions, build supportive tooling and resources required for an SLO-based approach, use SLO data to present meaningful reports to leadership and your users.

a classic examination of superb design through the centuries widely regarded as a classic in the field, experiencing architecture explores the history and promise of good design, generously illustrated with historical examples of designing excellence ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish feeding pavilion of Beijing's Winter Palace. Rasmussen's accessible guide invites us to appreciate architecture not only as a profession but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit but a community undertaking: dwellings were built with a natural feeling for place, materials, and use, resulting in a remarkably suitable comeliness. While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract individual pursuit but also from one's shared everyday experience of architecture in real time. Its particular use of light, color, shape, scale, texture, rhythm, and sound, experiencing architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered what instrument the architect plays on.

Tracking the Neolithic House in Europe

dystopia a natural history is the first monograph devoted to the concept of dystopia taking the term to encompass both a literary tradition of satirical works mostly on totalitarianism as well as real despotisms and societies in a state of disastrous collapse this volume redefines the central concepts and the chronology of the genre and offers a paradigm shifting understanding of the subject part one assesses the theory and prehistory of dystopia by contrast to utopia conceived as promoting an ideal of friendship defined as enhanced sociability dystopia is defined by estrangement fear and the proliferation of enemy categories a natural history of dystopia thus concentrates upon the centrality of the passion or emotion of fear and hatred in modern despotisms the work of le bon freud and others is used to show how dystopian groups use such emotions utopia and dystopia are portrayed not as opposites but as extremes on a spectrum of sociability defined by a heightened form of group identity the prehistory of the process whereby enemies are demonised is explored from early conceptions of monstrosity through christian conceptions of the devil and witchcraft and the persecution of heresy part two surveys the major dystopian moments in twentieth century despotisms focussing in particular upon nazi germany stalinism the chinese cultural revolution and cambodia under pol pot the concentration here is upon the political religion hypothesis as a key explanation for the chief excesses of communism in particular part three examines literary dystopias it commences well before the usual starting point in the secondary literature in anti jacobin writings of the 1790s two chapters address the main twentieth century texts usually studied as representative of the genre aldous huxley s brave new world and george orwell s nineteen eighty four the remainder of the section examines the evolution of the genre in the second half of the twentieth century down to the present

daylighting offers a general theory and introduction to the use of natural light in architecture the fourth of derek phillip s lighting books draws on his experience to illustrate how best to bring natural light into building design as sustainability becomes a core principal for designers daylighting comes to the fore as an alternative to artificial energy consuming light here phillips makes a rational argument for considering daylight first outlining the arguments in favour of a daylight approach and goes on to show through a series of beautifully illustrated case studies how architects have created buildings in which natural light has been shown to play a major strategic role in the development of the design of a building
