differential equations an introduction to modern methods and applications is a textbook designed for a first course in differential equations commonly

taken by undergraduates majoring in engineering or science it emphasizes a systems approach to the subject and integrates the use of modern computing technology in the context of contemporary applications from engineering and science section exercises throughout the text are designed to give students hands on experience in modeling analysis and computer experimentation optional projects at the end of each chapter provide additional opportunities for students to explore the role played by differential equations in scientific and engineering problems of a more serious nature
