**Homilies on the Psalms** 2020-12-18 the very idea that the teachings can be mastered will arouse controversy within buddhist circles even so ingram insists that enlightenment is an attainable goal once our fanciful notions of it are stripped away and we have learned to use meditation as a method for examining reality rather than an opportunity to wallow in self absorbed mind noise ingram sets out concisely the difference between concentration based and insight vipassana meditation he provides example practices and most importantly he presents detailed maps of the states of mind we are likely to encounter and the stages we must negotiate as we move through clearly defined cycles of insight its easy to feel overawed at first by ingram s assurance and ease in the higher levels of consciousness but consistently he writes as a down to earth and compassionate guide and to the practitioner willing to commit themselves this is a glittering gift of a book in this new edition of the bestselling book the author rearranges revises and expands upon the original material as well as adding new sections that bring further clarity to his ideas

ever increasing research evidence continues to mount having started my research on the connection of the hydraulis to the roots of the more recent industrial revolution at the university of st gallen in 1989 over 30 years ago i continue to identify additional support for it we do not know whether the beginnings of an industrial revolution in hellenistic greece would have continued if not cut off by the roman empire's conquests neither do we know whether the more recent latent industrial revolution could have risen up again in the 17th century without vitruvius or hero of alexander's preserved writings the point of this

book is to emphasize with new findings that had the romans not stopped the growth of science and technology in the hellenistic period that it would have likely continued to develop into a full fledged industrial revolution secondly the more recent industrial revolution borrowed heavily on the technology and science of the hellenistic period in the true sense of the renaissance 17th century industrial progress largely picked up the written remnants of antiquity to be able to continue on after a centuries long caesura

### **The Industrial Revolution - Lost in Antiquity - Found in the Renaissance** 2022

the first chapters uncovers the origins of the first paragraph or chapter divisions in copies of the christian scriptures its focal point is the magnificent fourth century codex vaticanus vat gr 1209 b 03 perhaps the single most significant ancient manuscript of the bible and the oldest material witness to what may be the earliest set of numbered chapter divisions of the bible the first chapters tells the history of textual division starting from when copies of greek literary works used virtually no spaces marks or other graphic techniques to assist the reader it explores the origins of other numbering systems like the better known eusebian canons but its theme is the first set of numbered chapters in codex vaticanus what nineteenth century textual critic samuel p tregelles labelled the capitulatio vaticana it demonstrates that these numbers were not as most have claimed late additions to the codex but belonged integrally to its original production the first chapters then breaks new ground by showing that the capitulatio vaticana has real precursors in some much earlier manuscripts it thus casts light on a long continuous tradition of scribally placed visual guides to the reading and interpreting of scriptural books finally the first chapters exposes abundant new evidence that this early system for marking the sense divisions of scripture has played a much greater role in the history of exegesis than has previously been imaginable

The First Chapters 2021-05-23 with reference to artefactual archaeological evidence and surviving manuscript documentation of the hydraulis i find that a new dialectical discussion might better analyze and address the underlying understanding of the steam engines longitudinal provenance and therefore requires a redefinition the origins of industrial revolutions themselves from ctesibius to the exploration of mars

**Codex** 2014-07-08 how to use design as a tool to create not only things but ideas to speculate about possible futures today designers often focus on making technology easy to use sexy and consumable in speculative everything anthony dunne and fiona raby propose a kind of design that is used as a tool to create not only things but ideas for them design is a means of speculating about how things could be to imagine possible futures this is not the usual sort of predicting or forecasting spotting trends and extrapolating these kinds of predictions have been proven wrong again and again instead dunne and raby pose what if questions that are intended to open debate and discussion about the kind of future people want and do not want speculative everything offers a tour through an emerging cultural landscape of design ideas ideals and approaches dunne and raby cite examples from their own design and teaching and from other projects from fine art design architecture cinema and photography they also draw on futurology political theory the philosophy of technology and literary fiction they show us for example ideas for a solar kitchen restaurant a flypaper robotic clock a menstruation machine a cloud seeding truck a phantom limb sensation recorder and devices for food foraging that use the tools of synthetic biology dunne and raby contend that if we speculate more about everything reality will become more malleable the ideas freed by speculative design increase the odds of achieving desirable futures
